New Deputy Clerk-Treasurer Joins Town Staff

While she may be new to her position as Deputy Clerk-Treasurer, Carla Kellogg is no stranger to Advance. She was born and raised in the town, attending nearby schools and graduating from Western Boone Junior-Senior High School. Working as the Deputy Clerk-Treasurer allows Kellogg to return to her roots, keeping in touch and in the loop with many of the town's residents and activities.

Anatomy of an Electric Utility Pole

Utility poles are a common sight throughout the United States, as they are located adjacent to many roadways that are visible while driving. While you see these poles every day, have you ever thought about the function of the poles and the lines and attachments that hang onto them?

Utility poles play an important role in electrical distribution, which is a fancy term for how electricity travels to your home or business. All of the lines and attachments that sit on the utility pole play an essential role in this process. Read on to learn more about the different parts that make up your everyday electric power pole.

1. Insulator: The insulator prevents wires from coming into contact with each other on the utility pole, which could cause fires, outages and other dangerous conditions.

2. Guy wire: The guy wire is a tensioned wire that helps to stabilize the utility pole to the ground.

3. Transformer: An electrical device, typically in a metallic enclosure, that converts high voltage electricity to a lower voltage for use in homes and businesses.

4. Fuse cutout: A combination of a fuse and a switch, the fuse cutout is used to protect power lines and other equipment from surges or overloads by disconnecting the power line from a transformer.

5. Crossarm: This horizontal piece of the utility pole is typically made of high-quality wood and holds power lines and other equipment, such as transformers, onto the pole.

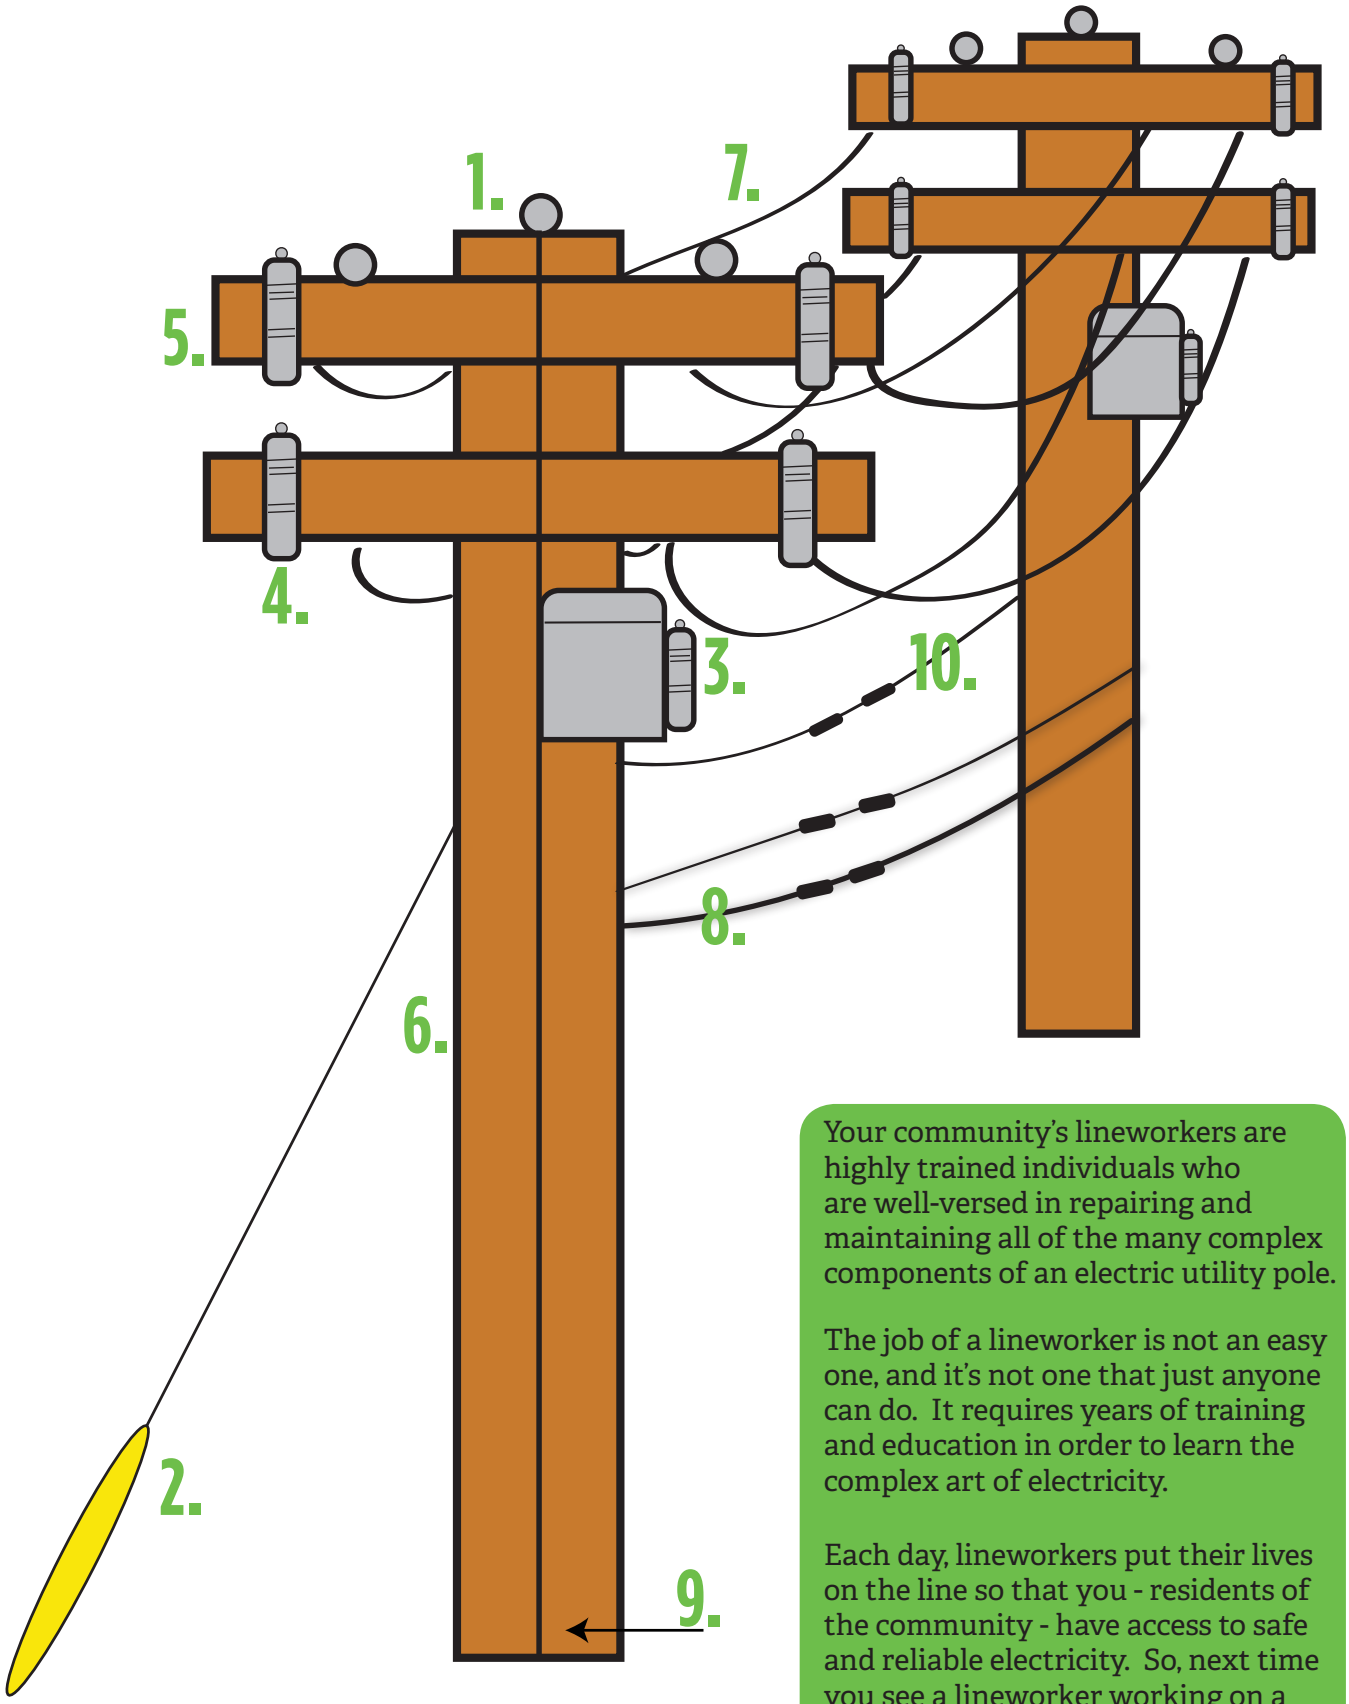
6. Utility pole: The utility pole is typically made of wood or steel, and can range in height from 30 feet to more than 100 feet. The pole serves as the backbone for the electric line and holds all of the components and equipment.

7. Primary wire: These wires are on the very top of the utility pole, and usually carry high voltage electricity from a substation.

8. Lowest wires: Utility poles don't just hold electric wires; other wires, such as telephone or cable wires, are also attached to these poles. Typically, these wires are found closest to the ground and are the lowest wire on the utility pole.

9. Ground wire: This wire runs the entire length of the utility pole, directing any electricity on the pole safely into the ground.

10. Secondary wire: Once the high voltage electricity has been converted to a lower voltage, the secondary wire carries that electricity to homes and businesses.



Your community's lineworkers are highly trained individuals who are well-versed in repairing and maintaining all of the many complex components of an electric utility pole.

The job of a lineworker is not an easy one, and it's not one that just anyone can do. It requires years of training and education in order to learn the complex art of electricity.

Each day, lineworkers put their lives on the line so that you - residents of the community - have access to safe and reliable electricity. So, next time you see a lineworker working on a utility pole, stop and thank them for their service to the community.

Deputy Clerk-Treasurer

-continued from page 1

"So far, the best part of my job has been reconnecting with all of the people who live here in Advance," said Kellogg. "It's neat that I know so many people and I think that helps me provide a better customer experience for everyone that walks through our doors."

As the Deputy Clerk-Treasurer, Kellogg is responsible for spearheading the utility billing process each month. She not only compiles the bills and mails them, but is also responsible for updating customer accounts and receiving payments. In addition to managing the utility billing process, Kellogg also coordinates office administrative tasks and assists Clerk-Treasurer Shari Johnson in compiling information to be used in various financial reports.

> "So far, the best part of my job has been reconnecting with all of the people who live here in Advance."
>
> -Carla Kellogg, Deputy Clerk-Treasurer

In addition to serving as the Deputy Clerk-Treasurer, Kellogg is also a restaurant manager at the Pizza Hut in Lebanon, Indiana, where she has worked since 1997. A self-proclaimed people person, Kellogg splits her time equally between the Advance Town Office and Pizza Hut, and says that she enjoys both jobs as they both allow her to interact with and help people.

Kellogg holds an associate's degree in accounting from Harrison College. She is married, and between her and her husband, have six children. Kellogg and her family reside in Lebanon, Indiana. The Town of Advance welcomes Kellogg as Deputy Clerk-Treasurer, and wishes her all the best!

Advance Volunteer Fire Department Executed Successful Fundraiser

The Advance Volunteer Fire Department presented its second annual Smokin' Country Music Festival on August 6th, located in a field just south of town. This year's musical lineup included performances by the Hunter Smith Band, Levi Riggs and Darlington Road. While the musical performances were the main draw, the fundraiser also featured a beer garden, a variety of food and drinks and a fireworks show.

All proceeds from the fundraiser went directly back to the fire department to help replace some of the aging firefighting gear that the volunteers use. According to Fire Chief Jim Caldwell, some of the gear is ten to twenty years old, and is in desperate need of replacement. The Advance Volunteer Fire Department thanks all who attended the event and donated to the worthy cause.

Celebrate Indiana's Bicentennial!

In an effort to celebrate Indiana's Bicentennial all year long, IMPA is bringing readers of the *Municipal Power News* fun facts about Indiana history. Read on to learn more about the Hoosier state.

Indiana's state motto, "Crossroads of America," has been in existence since the early 1800s when river traffic along the Ohio River was a major mode of transportation. Today, more interstates and highways intersect Indiana than any other state.

Southern and central Indiana contain an abundance of limestone, which has been used in the construction of famous buildings such as the Pentagon and the Empire State Building.

Indiana's state flag was adopted in 1917 and was designed by Paul Hadley as part of a contest celebrating the state's 100th birthday.

Tidbits & Trivia

Question: Which type of wire on a utility pole carries the high voltage electricity from a substation?

a) Secondary wire
b) Primary wire
c) Ground wire
d) None of the above

Send your answer to the question to IMPA, and we will randomly select winners from all of the correct entries to receive an energy efficiency prize pack. Please send your name, e-mail address and address with your answer to:

The **Indiana Municipal Power Agency** (IMPA) is a not-for-profit organization that provides a low cost, reliable and environmentally-responsible power supply to its members.

IMPA member utilities purchase their power from IMPA and deliver that power to the residents and companies within the community.

Substation

noun.

A facility used for switching and/or changing or regulating the voltage of electric energy. A substation may tie generating stations to transmission systems or transmission systems to distribution systems.

IMPA Continues Building Solar Parks in Local Communities

Throughout the last two years, the Indiana Municipal Power Agency (IMPA) has constructed nine solar parks in large and small IMPA communities throughout Indiana. This year, the Agency is in the midst of constructing four additional solar parks in the communities of Anderson, Huntingburg, Waynetown and Washington. These solar parks are all aimed at adding more renewable and economical energy resources to IMPA's power portfolio.

When energy is created by the solar parks, it is then placed onto the local distribution system in whichever town or city the solar park is located in. As the solar power is produced, it becomes a part of all of the electric generation that is supplying the system, which is typically a mixture of power produced via coal, natural gas, solar, wind and nuclear.

The process of generating electricity from the sun may seem to be a complex one, but in reality, is really quite simple. When sunlight hits the solar panels, the panels convert that energy into direct current electricity. That electricity is transferred to an inverter, located within the solar park. The inverter then takes the direct current electricity and converts it into alternating current (AC) electricity. Once converted to AC, the transformer steps-up the voltage to the proper level, and is then transferred to the interconnection point on the distribution system. The AC meter measures the energy from the solar park prior to its connection to the distribution system and ultimately the customer.

IMPA plans to add approximately 10 megawatts of solar capacity into its overall power portfolio each year, meaning more and more IMPA member communities will have solar parks within the coming years. For more information on IMPA's solar parks, visit www.impa.com.

Chicken and Dumpling Casserole

Recipe submitted by Vicky Hicks-Spear of Tell City, Indiana.

-1 pound chicken breasts
-2 cups chicken broth
-1/4 cup butter
-2 cups Bisquick
-2 cups whole milk
-1 can cream of chicken soup
- 3 tsp. chicken bouillon
-1/2 tsp. sage
-1 tsp. black pepper
-1/2 stick butter

Preheat oven to 350 degrees. In a 9x13 baking pan, melt 1/2 stick butter. Shred chicken and spread over butter. Sprinkle black pepper and sage over the chicken. Do not stir. In a small bowl, mix milk and Bisquick. Slowly pour over chicken. In another medium bowl, whisk together 2 cups of chicken broth, chicken bouillon and soup. Once blended, slowly pour over the Bisquick layer. Bake casserole for 30 to 40 minutes, or until golden brown.

Strawberry Delight

Recipe submitted by Burdett Parsons of Washington, Indiana.

-1 pre-made angel food cake
-8 oz. cream cheese
-16 oz. strawberry glaze
-16 oz. tub whipped cream
-1 1/3 cup sugar
-1 qt. fresh strawberries

Tear angel food cake into pieces and mix with 1/3 of the tub of whipped cream. Put whipped cream mixture into the bottom of a serving dish. Mix the rest of the whipped cream with the cream cheese and the sugar and place on top of the cake. Slice strawberries into quarters and mix with the strawberry glaze. Then, spread the strawberry mixture over the top of the cake.

The **MUNICIPAL POWER NEWS** is a periodic publication of the Indiana Municipal Power Agency and the 60 communities that it serves with wholesale power.

Save Energy This Fall!

As the summer months wrap up and temperatures begin to cool, take action to ensure that your house and habits are as energy efficient as possible. Read on for helpful tips to save money this fall:

- Schedule regular maintenance for your heating system.
- Take shorter showers. This can save hundreds of gallons of hot water and also reduce water heating costs.
- Replace the air filter in a furnace on a monthly basis. A dirty air filter makes the heating and cooling system work harder, causing wear and tear on the equipment.
- Turn off kitchen and bath ventilation fans after use. If left on, the fans can blow the warm air from inside your home to the outside.

The best way to reduce your electric bill is to do everything you can to make your home more energy efficient.
