New Fire Station Makes Progress

On June 17, Edinburgh's new fire station that has been under construction for nearly a year reached substantial completion. While local firefighters are still operating out of the town's older fire station, they look forward to moving into their new facility in the near future. The extensive project on County Road 900 North will provide much-needed room for the department's operations than its current location downtown. This will help support the department's 24/7 service, which has been in place for three years now.

Edinburgh's firefighters work hard to run the local department, protecting the community and keeping residents out of harm's way through their emergency services. While their priorities may focus on emergency response, the department also concerns itself with improving the overall local quality of life and assisting those who need help outside of emergency situations. Through educating local students about fire safety, hosting training sessions for nearby communities, and assisting with town events such as the Bicentennial Fall Festival Parade, the fire department is a

IMPA Responds to Winter Storm Elliott

From December 22 to the 26 of 2022, Winter Storm Elliott swept across North America, causing record low temperatures and severe winter conditions throughout the United States. Snowfall, ice, and blizzard-like conditions blew through much of the Midwest while hazardous road conditions kept many of us hunkered down inside through the holidays. During these days of sub-zero temperatures, approximately 1.5 million utility customers throughout the country lost power (according to www.poweroutage.us).

Fortunately, Indiana utility customers were only a small portion of those without power, and the Indiana Municipal Power Agency (IMPA) worked diligently with neighboring utilities and the state's Regional Transmission Organizations to ensure the reliability of the power grid. IMPA's seven combustion turbines—totaling 249 megawatts (MW) of capacity in Anderson, Indiana, and Richmond, Indiana—were staffed and operational through the winter storm. The Anderson and Richmond units are run by IMPA employees who worked day and night through December's winter storm to ensure power was delivered to utility customers. These units,

which primarily run on natural gas and are built to operate in temperatures down to -20 degrees Fahrenheit, are a vital dispatchable resource in extreme weather events due to their capability to utilize ultra-low sulfur No. 2 fuel oil as a backup. The backup fuel allowed the units to run and provide power during the whole severe winter weather event.

Other staff members who were out in the field during the cold weather event included IMPA Service Corp's linemen and operations employees who responded to outages in member communities. During Winter Storm Elliott, IMPA Service Corp's crews responded to eight IMPA member communities to assist with power restoration to keep utility customers warm in their homes.

IMPA is grateful to the dedicated staff members who braved the historic winter conditions to ensure the rest of us could remain safe and warm at home. The Agency's reliability, whether during a typical day or an extreme period of uncertainty, is its upmost priority. Now, as we head toward the warmer weather of spring, IMPA looks forward to continuing its legacy of reliable operations and excellent electric service for all member communities. •

How Does Reliable Electricity Reach Me?

Your power is unique as it is distributed not by a for-profit electric utility, but rather by your municipally-owned, locally controlled electric utility. Your municipal electric utility—also known as a “public power” utility—receives its power from the Indiana Municipal Power Agency, a not-for-profit organization created by 61 public power utilities in the Midwest. This is where your electricity begins!

STEP 1

IMPA is the wholesale power provider to your community, meaning that it produces or purchases electricity (depending on what is most economically advantageous) and transmits that energy to your local utility. IMPA’s power supply portfolio is made up of coal, natural gas, solar, wind, and nuclear energy. By providing its member communities with power from multiple sources, IMPA can maintain stable costs.

STEP 2

Once the power is generated, no matter from which type of resource, a set of equipment located within a substation is used to “step up” the electricity’s voltage. A higher voltage means that the electricity can travel longer distances over high-voltage transmission lines with lower energy losses.

STEP 3

Once “stepped-up,” the electricity is sent along transmission lines, allowing it to reach IMPA’s member communities. IMPA jointly owns a portion of the state’s transmission system, which covers about 2/3 of Indiana.

STEP 4

Once the electricity reaches a community like yours, it is “stepped down” by a local substation, bringing the power to a lower voltage that will allow it to travel on your local community’s distribution power lines.

STEP 5

The power then travels along local distribution lines owned by your public power utility to reach homes and businesses in the community.

Tidbits & Trivia

The **Indiana Municipal Power Agency** (IMPA) is a not-for-profit organization that provides a low-cost, reliable, and environmentally-responsible power supply to its members. IMPA provides this wholesale power to 61 communities in Indiana and Ohio, who collectively make up the Agency's membership.

Question: What is one benefit of driving an electric vehicle rather than a gas-powered car?

Send your answer to newsletter@impa.com, along with your name, e-mail address, and address for a chance to win an energy efficiency prize pack!

Local Road Construction

This July, a contracting company hired by the town of Edinburgh will begin construction on South Main Street with the goal of extending the roadway, as well as Tobias Drive from Charlotte Drive to the new extension of S. Main St. The current construction schedule has an anticipated completion date of early October, given no complications arise.

This project has largely been funded by a grant from the Indiana Economic Development Corporation (IEDC) and the Regional Economic Acceleration and Development Initiative (READI) program. Through this grant opportunity, Edinburgh was awarded \$750,000 of the estimated \$1.2 million construction costs to extend S. Main St. Through the READI Program, the IEDC hopes to encourage communities to “retain talent today and attract the workforce of tomorrow,” using the program’s funding as an impetus. The funds granted to Edinburgh will flow through Southern Indiana Housing and Community Development Corporation as a sub-grantee.

During the upcoming month of construction, please be safe while driving through the heart of Edinburgh and be mindful of construction workers who are working to make your community a better place! ●

Council Chambers Open to the Public

The New Council Chambers at Town Hall have been completed with a new entrance, a seating capacity of 60 guests, ADA compliant restrooms, and modern amenities. Town leaders want to remind you that all Council Meetings are open to the public, so feel free to join a meeting in the newly renovated space.

Council Meetings take place on the second and fourth Monday of each month at 6:00pm. Come check out the new chambers and get to know your town council a little better! •

fantastic asset within the community. These committed men and women deserve the adequate space and equipment that will be provided by the new fire station.

The town hopes to have a grand opening for the fire station by late summer or early fall, depending on when the facility reaches full completion. Many thanks to the community's firefighters and congratulations on your new space! •

What's the Word?

Gas Turbine Plant

noun

A facility which uses natural gas or other liquid fuels to power a combustion turbine and generate electricity. The first true gas turbine was patented in 1791!

IMPA owns seven combustion turbines and associated facilities totaling 419 MW in the aggregate. These include three units in Anderson, IN, two near Richmond, IN, and two in Indianapolis, IN. IMPA employees operate and maintain the combustion turbines located in Anderson and Richmond, while the plant in Indianapolis is operated and maintained under a contract with a separate utility that has two other units at the same facility.

Cooking Corner

Broccoli Casserole

Recipe submitted by Kimberly of Paoli, Indiana

- 2 lbs broccoli, frozen or cooked
- 1 roll ritz crackers, crumbled
- 1/2 lb velveeta, cubed
- 1 stick butter divided in half

Cook broccoli according to package directions. Add velveeta and 1/2 stick butter. Cook until melted. Butter a 2 qt casserole dish. Pour broccoli into casserole dish. Pour crumbled crackers on top. Melt remaining 1/2 stick butter and pour on crackers. Bake on 350 degrees for 30 minutes and enjoy!

White Mountain Salad

Recipe submitted by Jean of Middletown, Indiana

- 1 small can crushed pineapple (in juice)
- 1 can chopped pecans
- 1/4 cup lemon juice
- 1 eight oz tub cool whip (thawed)
- 1 can Eagle brand milk

In a large bowl, stir all ingredients together. Cover and refrigerate for 2 hours.

“When I take this recipe to a dinner, I always get several requests for the recipe!” - Jean

How Do I Save Energy in Hot Weather?

Last year, we asked *Municipal Power News* readers, “What are some of the methods you use to reduce your energy consumption in hot weather?” Here’s what Kenneth had to say!

“Our answer at home is to close the drapes, blinds, and try to cook with the air fryer, microwave, or outside on the grill instead of using the stove or oven on the really hot days. We’ve already purchased new thermo sliding glass doors with blinds and low-e ratings. We’ve also spray-foamed the basement

walls and the underside of the roof. For a 1964 house, we feel pretty efficient.

At work, we try to close the blinds and raise the thermostat a degree or two. We also bought two digital smart thermostats and replaced the old mercury bulb sliders.”

-Kenneth E

That’s a great answer, full of energy efficiency tips! Below are a few other ways you and your family can save on energy this summer.

Energy Efficiency Tip #1

Use fans around your home to circulate cool air. Set ceiling fans to turn counter clockwise, as this will push air down and create a cooler feeling in the room.

Energy Efficiency Tip #2

Replace air filters in your home with each season. Dirty air filters can cause your system to work harder and longer, using unnecessary energy as a result.

Energy Efficiency Tip #3

Keep lamps and TV sets away from your thermostat. Thermostats can sense the heat that these items give off, which can cause the A/C to run longer than required.

Edinburgh Hires New Town Manager

On June 12, Edinburgh welcomed Kevin McGinnis to the role of Town Manager. In this role, McGinnis will oversee the day-to-day administrative tasks and operations of the town. He will also serve as a liaison to all town departments, citizens, and state and federal government entities. McGinnis previously worked as Town Manager for the towns of Bargersville and Whiteland.

Please help us congratulate and welcome Kevin McGinnis to his new position in the community! •
