# New IMPA Commissioner for Edinburgh

November 13. Kevin Rubush was appointed to be Edinburgh's new commissioner for the Indiana Municipal Power Agency (IMPA). IMPA is Edinburgh's not-forprofit wholesale power provider, supplying electricity to 61 member communities throughout the Midwest. Like public schools and libraries, public power utilities such as Edinburgh's are owned by the community and run as a division of local government. Governed by a local city or town council or an elected or appointed board, community citizens have a direct voice in utility decisions, including the rates it charges and its sources of electricity. Since IMPA is a nonprofit organization owned and governed by its member communities, the community of Edinburgh also has a say in the direction of their wholesale power provider through an IMPA Commissioner.

At its December Board Meeting, IMPA welcomed Rubush into the Commissioner role for Edinburgh. Rubush is well acquainted with Edinburgh's community and electric utility as a recent retiree for the local Electric Department. He worked for 35 years at the utility before retiring earlier this year, but

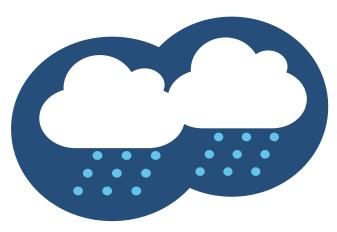

# Winter Safety with IMPA!

he winter season is upon us, and while it is the least favorite time of year for many, preparing for the cold can help things go over a bit more smoothly. Use this time to remind yourself and your loved ones about the following safety tips that will help everyone enjoy the time to come as best as they can.

#### Driving

- Drive slowly and attentively in icy or snowy conditions. Give yourself plenty of time to get to your destination.
- Keep your vehicle's gas tank as full as possible throughout the winter season. This can prevent your fuel lines from freezing, which can result in your car not starting.
- Dress warmly and keep an extra set of clothes and blankets in the car.
- Avoid using backroads, as major streets and highways will have better clearance in bad conditions.

#### **Avoiding Fires**

- Never plug a space heater into an extension cord or power strip only plug them directly into an outlet.
- Never leave a space heater, lit fireplace, or candles unattended for long periods of time.
- Portable generators can be great during a winter power outage, but keep in mind that they pose fire and carbon monoxide poisoning risks. Never run a generator indoors or in enclosed areas, and keep fuel containers away from heating devices.

#### **Snow Removal**

- Before going outside to clear snow from a driveway or walkway, be sure to stretch just like you would before regular exercise.
- When shoveling snow, be sure to stay hydrated and avoid overexertion. Take frequent breaks to let your body rest, as cold weather can put a unique strain on your heart and lungs.
- Keep dry while working outside with snow. Wet clothes will make your body lose heat faster.

### How Does Public Power Work?

he transmission lines stretching across the country carry electricity to households and businesses nationwide. However, some of the electricity travels to customers served by investor-owned utilities (IOUs) or rural electric cooperatives (REMCs), while other households like yours are served by a public power utility. Your community, as a member of the Indiana Municipal Power Agency (IMPA), buys its electricity from the Agency before selling it to you and bringing it to your door. The electricity that your community purchases is called wholesale power-it is supplied to your local public power utility for resale to retail customers of the utility. By purchasing wholesale power in bulk, the member utilities of IMPA are able to provide electricity with the economic advantages than if they were to individually generate the power themselves or purchase it elsewhere. Your community takes advantage of this benefit, since all 61 member communities of IMPA work together to purchase power in bulk through the Agency.

Member utilities of IMPA have contracts with the Agency to ensure that all the electric needs of the community are met. IMPA, by either generating power at a generation facility or purchasing it from other utilities, places the power on the electric grid through transmission lines.

The high voltage electricity travels across the grid on these transmission lines to your community. Before the electricity gets to your residence, a substation transformer is used to lower the voltage of the electricity to make it safer to travel across shorter distances than the transmission lines cover. This lower voltage also makes it safer for the electricity to be in closer proximity to traffic and people. Once electricity goes through the transformer in the substation, it moves through distribution lines in vour local community to a transformer at homes and businesses. It then arrives at your home and allows you to turn on the lights, heat your home, and watch tv.

Public power utilities are not just there to provide power – they work for the betterment of the community, too. These utilities are embedded in the fabric of their communities—boosting community investment, supporting local education, and getting involved with beautification and charitable programs. As a result, public power customers benefit from affordable energy, better service, local control, and a utility that cares about the overall well-being and growth of your community.•

At IMPA Board Meetings, a representative from your community helps guide the direction and decisions of the Agency.

# Tidbits & Trivia

The Indiana Municipal Power Agency (IMPA) is a not-for-profit organization that provides a low-cost, reliable, and environmentally-responsible power supply to its members. IMPA provides this wholesale power to 61 communities in Indiana and Ohio, who collectively make up the Agency's membership.

What are some of the benefits of public power?

# New IMPA Commissioner

-continued from page 1

remains committed to serving the town and representing its public power needs by coming aboard as an IMPA Commissioner.

Just like all IMPA commissioners, Rubush was appointed by his community's governing body to represent his town to IMPA, acting as a two-way communicator between the community and the Agency. As Edinburgh's IMPA commissioner, Rubush will participate and vote in monthly board meetings that guide the direction of IMPA.

"From small towns like Edinburgh, to larger cities like Anderson and Richmond, the diversity of our Board of Commissioners is one of IMPA's greatest strengths," said Jack Alvey, President and CEO of IMPA. "We are glad to welcome Kevin, and his experience and knowledge, to the Board as we continue our relationship with Edinburgh and serving our

municipal electric communities."

Having community representation on IMPA's Board is just one of the many benefits of having a municipally-owned power utility, like Edinburgh's. As a public power community, the utility's customers are friends, family, and neighbors of those who work to operate the electric department. This connection fosters community-centered service on the part of utility employees. Public power utilities also provide local jobs and support the local

### Thank You to Mike Jenner!

Mike Jenner spent decades as Edinburgh's IMPA Commissioner before his retirement in 2023, serving as one of the most active members of the Agency's Board and ensuring great service to the community.

IMPA is thankful to Jenner for his commitment and strong advocacy for public power over his years as Commissioner. IMPA wishes him the best in his retirement.•

community through economic development, demonstrating environmental stewardship, and investing back into their communities. To learn more about the benefits of public power, visit www.impa.com/publicpower! •

Investigating Power Terminology

### **Distribution Lines**

Utilities use distribution lines to transport electricity from the larger transmission system to individual customer homes and businesses. While transmission lines carry electricity across long distances at a high voltage, distribution lines carry electricity over shorter distances at a lower voltage. You may see transmission lines while driving on a highway, but the utility lines you see on the streets of your community are distribution lines.

Distribution lines bring electricity to its final stage of delivery. As a member of a public power utility, your town or city owns and operates the distribution lines in your community. For a chance to be featured in the newsletter and win a prize, send your recipe to:

# **Cooking Corner**

### **Eggnog Bread**

Recipe submitted by Susan of Richmond, Indiana

- 2 large eggs
- <sup>3</sup>/<sub>4</sub> cup skim milk
- <sup>1</sup>⁄<sub>4</sub> cup orange juice
- -1<sup>3</sup>⁄<sub>4</sub> cups eggnog
- <sup>1</sup>/<sub>2</sub> cup canola oil
- 1 tbsp grated orange zest
- -4 <sup>3</sup>/<sub>4</sub> cups all-purpose flour

- <sup>3</sup>⁄<sub>4</sub> cup sugar
- 2 tbsp baking powder
- <sup>1</sup>/<sub>2</sub> tsp salt
- 1 tsp ground cinnamon
- 1 tsp ground nutmeg
- <sup>3</sup>⁄<sub>4</sub> cup dried cranberries
- <sup>3</sup>/<sub>4</sub> cup chopped macadamia nuts

Preheat oven to 350°F. Whisk wet ingredients together with orange zest in a bowl. In another bowl, combine all dry ingredients except for cranberries and macadamia nuts. Add the liquid mixture to the dry mixture, carefully stirring until the flour is moistened. Fold in cranberries and nuts. Grease and flour 2 loaf pans and pour in batter. Bake for 50-60 minutes, or until a toothipick inserted comes out clean. Cool in pans for 10 minutes, then remove wire racks to cool completely. Slice and serve with orange marmalade. Or, to serve without a spread, use the glaze below.

In a small bowl, mix: - 1 tbsp eggnog - ¾ cup confectioner's sugar

Drizzle mixture over the cooled loaves

### How Do I Save Energy in Cold Weather?

Last year, we asked readers of the *Municipal Power News* some of the methods they use to reduce energy consumption in cold weather. Here is what some of you said!

"I have reduced my energy consumption due to my purchase of long cloth door tubes that resemble snakes. They are the draft prevention cloth tubes approximately 36" x 3 1/2" filled with beans or double tubes with center strips. They can be placed in the home at the bottom of outside doors or where drafts enter under doors inside a home. The double tube style can slide under the storm door outside the house door---one tube outside the storm door and the other tube set between the storm door and the inside house door. These can also be used on doors in cold rooms with closed doors to stop drafts. This is really great in blocking cold air at the floor level that cause cold feet and drafts."

- Jean

"I often use an infrared/radiant space heater that is thermostat-controlled. During the day I close off unused rooms so my living room/kitchenette is comfortably warm. The glow of the radiant heater is pleasing like a fireplace. You definitely need to wear insulated slippers or plush socks indoors in

addition to layered clothing. Wearing indoor weather-appropriate clothing, I can keep my heater set on a lower temperature generally less than 65 degrees. My furnace, in comparison, needs to be set at 70+ degrees to maintain satisfactory room warmth."

- Penny

"During the cold weather months, the most effective method for reducing my energy consumption is by closing off rooms that do not necessarily have to be heated all day. I also put plastic on any drafty windows and use draft stoppers for my doors. I've replaced most of my home's light bulbs with energy efficient LED bulbs and I change my furnace filter often. Room darkening curtains help keep the heat in and as the famous saying goes, I never let the water run!"

– Tiffany

"The method that I use most is to wear warmer clothes in the house. I know that there are people who want to sit around the house in shorts and t-shirts, and run around the house in bare feet, all the while having their thermostat turned way up. That makes no sense to me. Today, for instance, it's 14° outside. The thermostat is set at 68° inside. I'm wearing a flannel shirt with a puffy vest, long pants, and shoes."

- Bruce

### **Avoid Common Utility Scams**

According to the Federal Trade Commission, more than 2 million fraud complaints are received each year, showing average total losses in the billions of dollars. Many of these scams are utility related, where scammers pretend to be representatives of utility companies and demand immediate payment to avoid service disconnects.

Learn How to Spot a Utility Scam with These Tips:

- Utility companies do not request payment, or other personal information, over the phone or through email.
- Utilities do not ask for gift cards, prepaid cards, or money transfers as forms of payment.
- Utilities will not contact you threatening to disconnect service or ask for immediate payment over the phone or email.
- Scammers use fake emails or phone numbers. If you have any questions about your account, contact the utility directly using the phone number or email listed on your bill.

Have you noticed a scam? Let your utility know. This can happen to you, your loved ones, and your neighbors.•
