Dunreith Fire Department: Serving for Over 100 Years

Whether facing a burning building or a medical emergency, Dunreith residents know that they can rely on the expertise of the local Dunreith Indiana Volunteer Fire Department (DVFD). The dedicated volunteers with DVFD work to not only protect the Dunreith community, but they often contribute their skills to surrounding towns like Knightstown, Straughn, and Spiceland through mutual aid efforts. While prioritizing emergency response, DVFD also works to improve local quality of life and foster a sense of community through many of the events that they host. Through their efforts to serve Dunreith, the local Fire Department contributes to a thriving small town.

“The volunteers at our Fire Department are incredibly active in the community,” said Tim Martin, Dunreith Town Council Member and involved member of the DVFD. “They play a large part in hosting the town’s annual holiday parties, educating kids in the community about fire safety, and supporting residents who are victims to home fires. We’re lucky to have such a great team working at

IMPA Celebrates 10 Years of its Solar Program

With the goal to expand the diversity of its power supply portfolio with economically feasible renewable generation sites, the Indiana Municipal Power Agency (IMPA) launched its solar program to construct solar parks within its member communities in 2014. At the time, solar power was just emerging as a cost-effective fuel resource for utilities, but IMPA embraced the challenge of incorporating this resource into its power supply portfolio to further diversify its resources and prepare for the future. Now, 10 years and 50 solar parks later, IMPA is proud of the numerous accomplishments made through its solar program and the nearly 200 megawatts of power that it contributes to all 61 member communities served by the Agency.

IMPA began its program cautiously, only constructing three demonstration solar parks in Frankton, Rensselaer, and Richmond, Indiana in its first year. Each site was housed on about eight acres of land and with 4,000 solar panels, and by the end of the year, the three sites generated 1.5 million kilowatt hours.

Through this process, IMPA expanded its knowledge of solar power and the steps needed to successfully develop parks of this scale in the most cost-effective way possible. Besides relying on in-house expertise, IMPA worked with local contractors in each of the three member communities to keep costs down and support local businesses. When construction of the three solar parks came in under budget while reliably providing environmentally-responsible electricity, IMPA and its Board of Commissioners started to envision the vast possibilities of building solar in several member communities. A spark was lit, and by 2015, six more solar parks were constructed in member communities, adding over 9 megawatts (MW) of solar capacity to the Agency's power supply portfolio.

In the ensuing years, IMPA increased its renewable footprint by building solar in collaboration with its member communities. As time progressed, so did the Agency's proficiency in constructing solar parks. By 2017, IMPA was constructing each of its solar parks with a single-axis

tracking system, allowing solar panels at each site to effectively track the movement of the sun throughout the day and generate more electricity as a result. The program continued to expand with new solar parks being constructed in member communities throughout the state, as well as additional parks being added to some communities whose infrastructure were able to handle more than one solar park . With the help of this program, IMPA achieved at least 30% low or no carbon resources by 2020 while still offering some of the lowest wholesale electric rates in the state of Indiana.

The success of IMPA’s solar program continues to thrive in recent years. In 2023, IMPA had its most prolific year yet for its solar park program as the Agency brought seven solar parks online in member communities. The agency’s largest park – at 9.9 MW – was completed, and IMPA celebrated a milestone as the Agency’s 50th solar park came online late in the year. From a small, idealistic program that started with three, 1-MW parks in 2014,

the Agency’s solar park program has grown exponentially in under 10 years. The Agency now has over 196 MW of solar power in member communities. Plans are already underway for four additional parks, and the Agency expects to surpass 209 MW of solar capacity by the end of 2025. The solar park program plays a key role in IMPA’s diverse power supply portfolio, and with its proven success rate, the Agency continues to provide a diverse fuel mix that benefits both consumers and the environment. •

Reader Feedback

The **Indiana Municipal Power Agency** (IMPA) is a not-for-profit organization that provides a low-cost, reliable, and environmentally-responsible power supply to its members. IMPA provides this wholesale power to 61 communities in Indiana and Ohio, who collectively make up the Agency's membership.

Dunreith Fire Department

-continued from page 1

DVFD—it's a big deal for such a little town like us.”

One reason why the DVFD is so well integrated into the fabric of the local community is its history. Dunreith's Fire Department was established over 100 years ago and has helped the town recover from disasters—big and small—since then.

Through the years, the DVFD has been through its ups and downs, perhaps most notably in 1968 in the aftermath of a train collision that resulted in a huge explosion and fire. According to one Dunreith resident who had lived through the bombing of London during WWII, the 1968 Dunreith explosion was more terrifying in comparison. Approximately 250 residents required evacuation from the town that January while the DVFD ran toward

the fire and smoke. Eventually, with the help of 29 other Fire Departments, the DVFD doused the flames and made the community safe for habitation again.

While circumstances have not been that dire for the entire town since then, DVFD volunteers still work hard to safeguard Dunreith in all events. Not only do they respond to emergencies and

provide preventive education, but they've also established the dual community building and fire station as a safe haven for those in need. Whether during a hot summer storm or a winter blizzard, Dunreith citizens are welcome to visit the building to cool off, warm up, or have access to utilities like electricity and water. Residents who need help are always encouraged to reach out to the DVFD for potential assistance.

Luckily, the community shows their appreciation and support for the DVFD often. Several community members come together during the Department's annual fundraisers, such as regular pancake breakfast events and the Historic National Road Yard Sale. The town also recently purchased a fire engine that has replaced the DVFD's primary engine to serve the town more effectively.

"With the newer truck, we'll be able to fit four more firemen on the vehicle and the equipment is much more efficient for response to a fire or hazardous chemical spill," said Martin. "We're thankful for the town's support in our work."

As a not-for-profit Department run entirely by volunteers, Dunreith is lucky to have such a committed team of firefighters in the area. To learn more about the DVFD and how they serve your community, please visit their social media page at www.facebook.com/DunreithFire! •

What's the Word?

Investigating Power Terminology

Watt

A watt is a unit of measurement used to show the rate of energy transfer over one second of time. Consequently, a kilowatt is equal to 1,000 watts, a megawatt is 1 million watts, and a gigawatt equals 1 billion watts.

You may have heard of a kilowatt hour (kWh), which is a common billing unit used by most utilities in the electric industry. Essentially, a kWh simply shows the energy use per hour of an appliance, device, or entire home measured in kilowatts. For example, a space heater rated at 1.5 kWh consumes 1,500 watts of power in one hour of continuous use!

Watts are named after James Watt, an inventor and engineer born in 1736 who also created the concept of horsepower.

Cooking Corner

Meatloaf

Recipe submitted by Marcie of Richmond, Indiana

- 2 lbs hamburger
- 2 eggs
- 10 to 12 crackers (crumbled)
- 1 onion diced
- 1 tsp baking soda
- 1/2 cup milk
- 2 pkgs instant oatmeal
- 2 to 3 squirts of ketchup

Mix all ingredients well. Form into a loaf and put into a greased loaf pan. Cover with ketchup. Refrigerate for 20 to 30 minutes covered to help the loaf firm up. Preheat oven to 350 degrees. Remove loaf from refrigerator and bake in preheated oven for 1 to 1 1/2 hours.

Once meatloaf is baked, remove from oven. Let rest on top of the stove for 30 minutes before cutting into so that it won't fall apart.

This recipe serves about 4 to 6 people. Invite your friends and family over to enjoy!

What are the Benefits of Public Power?

In the last issue of the *Municipal Power News*, we asked you what some of the benefits of public power are. As a reader of this newsletter, you live in a public power community, which means the electric utility that serves your power needs is a not-for-profit utility, owned and operated by your municipality.

The benefits of public power are numerous. Here is what some of our readers had to say about the advantages of living in a public power community.

“By being a part of the community, public power utilities can boost investment in the community, support local education, and be involved with charitable programs. They also care about the overall well-being of the communities they serve.”

– Fred

“Since public utilities are nonprofit organizations, their main focus is on providing affordable services rather than maximizing profit. This often leads to lower rates for customers, as any surplus revenue is reinvested into the improvement and expansion of services. Public power

also eliminates the need for shareholders and dividends, further reducing costs. Consequently, individuals and businesses can save money on essential utilities, allowing them to allocate their resources more efficiently.”

– Chris

“There are many benefits to public power, such as being able to be provided with economic advantages. IMPA makes sure all electric needs of the community are met, as well. It boosts community investments, supports local education, and gets involved with beautification.”

– Bridgette

These are all great answers that highlight how public power improves your community to help it thrive. Additionally, public power is affordable. According to a 2021 American Public Power Association (APPA) comparison, public power customers of Indiana and Ohio typically saved an average of more than 40% when compared to other types of electric utilities. APPA also reports that nearly 80% of projects currently under construction by public power utilities are solar and wind generating sources. This shows that public power utilities also recognize the importance of environmental stewardship and continue to invest in sustainable power sources.

Public power communities, including yours, consistently work to provide low-cost, reliable, and environmentally-responsible power to their consumers.
