Peru Utilities Keep Community Powered

When the weather is at its worst, your municipal electric community's lineworkers are there, restoring power and safety in the community. When your city seeks residential, commercial, or industrial growth, your local lineworkers are there, ensuring developments have access to electricity. When it seems like a normal day, your city's lineworkers are there, performing preventative maintenance and trimming trees to ensure reliability of Peru's electric system. When your community needs them most, your lineworkers are there.

Every day, your utility's committed lineworkers risk their lives to provide Peru homes and businesses with power. Working on power lines requires the upmost skill, expertise, teamwork, and patience. With frequent exposure to hazardous heights, high voltages, and a heavily trafficked work environment, the job is consistently ranked as one of the most hazardous in the United States. Despite this, Peru's electric crew remains committed to the essential duty of power delivery.

"All the staff members at our utility are dedicated to providing the best customer service to our consumers," said Josh Chance,

IMPA Celebrates 10 Years of its Solar Program

With the goal to expand the diversity of its power supply portfolio with economically feasible renewable generation sites, the Indiana Municipal Power Agency (IMPA) launched its solar program to construct solar parks within its member communities in 2014. At the time, solar power was just emerging as a cost-effective fuel resource for utilities, but IMPA embraced the challenge of incorporating this resource into its power supply portfolio to further diversify its resources and prepare for the future. Now, 10 years and 50 solar parks later, IMPA is proud of the numerous accomplishments made through its solar program and the nearly 200 megawatts of power that it contributes to all 61 member communities served by the Agency.

IMPA began its program cautiously, only constructing three demonstration solar parks in Frankton, Rensselaer, and Richmond, Indiana in its first year. Each site was housed on about eight acres of land and with 4,000 solar panels, and by the end of the year, the three sites generated 1.5 million kilowatt hours.

Through this process, IMPA expanded its knowledge of solar power and the steps needed to successfully develop parks of this scale in the most cost-effective way possible. Besides relying on in-house expertise, IMPA worked with local contractors in each of the three member communities to keep costs down and support local businesses. When construction of the three solar parks came in under budget while reliably providing environmentally-responsible electricity, IMPA and its Board of Commissioners started to envision the vast possibilities of building solar in several member communities. A spark was lit, and by 2015, six more solar parks were constructed in member communities, adding over 9 megawatts (MW) of solar capacity to the Agency's power supply portfolio.

In the ensuing years, IMPA increased its renewable footprint by building solar in collaboration with its member communities. As time progressed, so did the Agency's proficiency in constructing solar parks. By 2017, IMPA was constructing each of its solar parks with a single-axis

tracking system, allowing solar panels at each site to effectively track the movement of the sun throughout the day and generate more electricity as a result. The program continued to expand with new solar parks being constructed in member communities throughout the state, as well as additional parks being added to some communities whose infrastructure were able to handle more than one solar park. With the help of this program, IMPA achieved at least 30% low or no carbon resources by 2020 while still offering some of the lowest wholesale electric rates in the state of Indiana.

The success of IMPA's solar program continues to thrive in recent years. In 2023, IMPA had its most prolific year yet for its solar park program as the Agency brought seven solar parks online in member communities. The agency's largest park – at 9.9 MW – was completed, and IMPA celebrated a milestone as the Agency's 50th solar park came online late in the year. From a small, idealistic program that started with three, 1-MW parks in 2014, the Agency's solar park program has grown exponentially in under 10 years. The Agency now has over 196 MW of solar power in member communities. Plans are already underway for four additional parks, and the Agency expects to surpass 209 MW of solar capacity by the end of 2025. The solar park program plays a key role in IMPA's diverse power supply portfolio, and with its proven success rate, the Agency continues to provide a diverse fuel mix that benefits both consumers and the environment.•

Reader Feedback

The Indiana Municipal Power Agency (IMPA) is a not-for-profit organization that provides a low-cost, reliable, and environmentally-responsible power supply to its members. IMPA provides this wholesale power to 61 communities in Indiana and Ohio, who collectively make up the Agency's membership.

What does having reliable electricity mean to you and your family?

Peru Utilities

-continued from page 1

General Manager of Peru Utilities. "Our linemen are an extension of that. They're always ready to work round the clock to strengthen our system and restore power when needed."

Due to the efforts of utility lineworkers, Peru Utilities is regularly recognized for its safety standards and high electric reliability. Just in the last two years, the utility has received a Certificate of Excellence in Reliability and a Safety Award of Excellence from the American Public Power Association (APPA)—the nation's voice for public power utilities. Peru has also been awarded APPA's RP3 designation, which honors public power utilities that shine in areas of reliability, safety, workforce development, and system improvement.

The lineworkers and all staff members at Peru Utilities give back to the community beyond utility service, too. Recently, utility staff attended a Career Day at Maconaquah Junior High to demonstrate job opportunities

ce: www.facebook.com/peruutilities

and potential future paths for students. Peru Utilities as a whole also hosts a bi-annual "Detrash the Wabash" riverbank cleanup event, organized and conducted by the Division of Water Management. Last September, the event cleaned up a whopping 700 lbs of trash from the river. The utility is always proud to support local events as well, regularly participating in celebrations like the Circus City Festival Parade.

Since Peru's utility employees are members of the community themselves,

Detrash the Wabash

The next <u>Detrash The</u> <u>Wabash</u> day will be April 20th! If you would like to participate or learn more about this event, please call 765-473-6681 (extension 2002).

they are enthusiastic about serving everyone in the city. This is a prime benefit of living in a public power community—those that manage and operate your utility truly care for electric customers because they are their neighbors, friends, and family members.

Even amongst public power utilities, Peru Utilities is uniquely devoted, as shown by their national recognition from APPA. Many thanks to the Peru Utilities staff who work so hard to help Peru thrive! •

What's the Word?

Investigating Power Terminology

Watt

A watt is a unit of measurement used to show the rate of energy transfer over one second of time. Consequently, a kilowatt is equal to 1,000 watts, a megawatt is 1 million watts, and a gigawatt equals 1 billion watts. You may have heard of a kilowatt hour (kWh), which is a common billing unit used by most utilities in the electric industry. Essentially, a kWh simply shows the energy use per hour of an appliance, device, or entire home measured in kilowatts. For example, a space heater rated at 1.5 kWh consumes 1500 watts of power in one hour of continuous use!

Watts are named after James Watt, an inventor and engineer born in 1736 who also created the concept of horsepower.

Cooking Corner

Meatloaf

Recipe submitted by Marcie of Richmond, Indiana

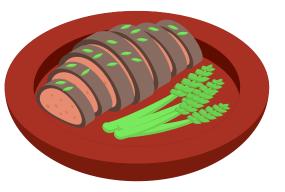

- 2 lbs hamburger
- 2 eggs
- 10 to 12 crackers
- (crumbled)
- 1 onion diced

- 1 tsp baking soda
- 1/2 cup milk
- 2 pkgs instant oatmeal
- 2 to 3 squirts of ketchup

Mix all ingredients well. Form into a loaf and put into a greased loaf pan. Cover with ketchup. Refrigerate for 20 to 30 minutes covered to help the loaf firm up. Preheat oven to 350 degrees. Remove loaf from refrigerator and bake in preheated oven for 1 to 1 1/2 hours.

Once meatloaf is baked, remove from oven. Let rest on top of the stove for 30 minutes before cutting into so that it won't fall apart.

This recipe serves about 4 to 6 people. Invite your friends and family over to enjoy!

What are the Benefits of Public Power?

n the last issue of the *Municipal Power News*, we asked you what some of the benefits of public power are. As a reader of this newsletter, you live in a public power community, which means the electric utility that serves your power needs is a not-for-profit utility, owned and operated by your municipality.

The benefits of public power are numerous. Here is what some of our readers had to say about the advantages of living in a public power community.

"By being a part of the community, public power utilities can boost investment in the community, support local education, and be involved with charitable programs. They also care about the overall well-being of the communities they serve."

- Fred

"Since public utilities are nonprofit organizations, their main focus is on providing affordable services rather than maximizing profit. This often leads to lower rates for customers, as any surplus revenue is reinvested into the improvement and expansion of services. Public power also eliminates the need for shareholders and dividends, further reducing costs. Consequently, individuals and businesses can save money on essential utilities, allowing them to allocate their resources more efficiently."

- Chris

"There are many benefits to public power, such as being able to be provided with economic advantages. IMPA makes sure all electric needs of the community are met, as well. It boosts community investments, supports local education, and gets involved with beautification." – Bridgette

These are all great answers that highlight how public power improves your community to help it thrive. Additionally, public power is affordable. According to a 2021 American Public Power Association (APPA) comparison, public power customers of Indiana and Ohio typically saved an average of more than 40% when compared to other types of electric utilities. APPA also reports that nearly 80% of projects currently under construction by public power utilities are solar and wind generating sources. This shows that public power utilities also recognize the importance of environmental stewardship and continue to invest in sustainable power sources.

Public power communities, including yours, consistently work to provide low-cost, reliable, and environmentally-responsible power to their consumers.
