**INDIANA MUNICIPAL POWER AGENCY SIGNS AGREEMENT FOR
PURCHASE OF WIND POWER**

CARMEL, IN, October 21 – The Indiana Municipal Power Agency (IMPA) has executed a power purchase agreement with Crystal Lake Wind, LLC, a subsidiary of FPL Energy, LLC, for the purchase of renewable wind energy from the Crystal Lake Wind Energy Center.

IMPA's agreement with Crystal Lake Wind, LLC enables the Agency to purchase 50 megawatts (MW) of renewable energy from the initial phase of the wind farm located in Hancock County, Iowa. When completed, the complex will be comprised of 180 wind turbines with a total capacity of 350 MW.

Under the power purchase agreement, IMPA could acquire enough energy to serve 15,000 homes and reduce carbon dioxide emissions by 150,000 tons per year. IMPA could begin receiving power from the project as early as November 2008 as individual turbines are completed and placed into service.

"The Crystal Lake Wind Farm allows IMPA to expand its already diverse energy portfolio with the addition of renewable energy," commented Raj Rao, President of IMPA. "Our customers will appreciate the environmental benefits it brings, and we welcome the opportunity to participate in a project that meets our goal of a low-cost, reliable and environmentally-responsible power supply."

As the wholesale power provider to 51 cities and towns in Indiana and one Ohio community, IMPA serves the electric needs of over 300,000 electric consumers. The Agency's diverse power supply portfolio includes generation fueled by coal, natural gas, nuclear, and now, wind. The Agency first entered into the realm of renewable energy in 2007 when it completed the purchase of Renewable Energy Credits for wind energy. IMPA also continues to

expand its current energy efficiency and conservation programs as well as investigate other energy alternatives.

The Indiana Municipal Power Agency is the not-for-profit wholesale power provider to 50 cities and towns across Indiana and one Ohio community who own and operate the municipal electric distribution systems in their communities. IMPA member communities deliver electric service to approximately 300,000 individuals throughout the state. For more information, visit www.IMPACOM.org.
