Regional Wellness Center Coming to Jasper

Since the adoption of the Impact Jasper Comprehensive Plan in 2019, city leaders have envisioned establishing a Regional Wellness Center in the community to provide additional health amenities and community gathering spaces. When asked during the creation of the Comprehensive Plan, the public frequently expressed a desire for more indoor recreation areas in the city. Thus, the idea for Jasper's Wellness Center was born. Now, with the recent purchase of a 10-acre plot of land in the heart of the city, the community is one step closer to such a facility.

Current plans for the Wellness Center include 4 full-sized gymnasiums, an indoor aquatic center, studios for rent, community rooms for large meetings, and office spaces available for local organizations. Classroom spaces will also be integrated into the design of the building, so educational institutions like Purdue Extension Dubois County or Memorial Hospital & Health Care Center can host public wellness classes.

The overall goal of the upcoming Center will be to act as a social hub with a

IMPA Celebrates 10 Years of its Solar Program

With the goal to expand the diversity of its power supply portfolio with economically feasible renewable generation sites, the Indiana Municipal Power Agency (IMPA) launched its solar program to construct solar parks within its member communities in 2014. At the time, solar power was just emerging as a cost-effective fuel resource for utilities, but IMPA embraced the challenge of incorporating this resource into its power supply portfolio to further diversify its resources and prepare for the future. Now, 10 years and 50 solar parks later, IMPA is proud of the numerous accomplishments made through its solar program and the nearly 200 megawatts of power that it contributes to all 61 member communities served by the Agency.

IMPA began its program cautiously, only constructing three demonstration solar parks in Frankton, Rensselaer, and Richmond, Indiana in its first year. Each site was housed on about eight acres of land and with 4,000 solar panels, and by the end of the year, the three sites generated 1.5 million kilowatt hours.

Through this process, IMPA expanded its knowledge of solar power and the steps needed to successfully develop parks of this scale in the most cost-effective way possible. Besides relying on in-house expertise, IMPA worked with local contractors in each of the three member communities to keep costs down and support local businesses. When construction of the three solar parks came in under budget while reliably providing environmentally-responsible electricity, IMPA and its Board of Commissioners started to envision the vast possibilities of building solar in several member communities. A spark was lit, and by 2015, six more solar parks were constructed in member communities, adding over 9 megawatts (MW) of solar capacity to the Agency's power supply portfolio.

In the ensuing years, IMPA increased its renewable footprint by building solar in collaboration with its member communities. As time progressed, so did the Agency's proficiency in constructing solar parks. By 2017, IMPA was constructing each of its solar parks with a single-axis

tracking system, allowing solar panels at each site to effectively track the movement of the sun throughout the day and generate more electricity as a result. The program continued to expand with new solar parks being constructed in member communities throughout the state, as well as additional parks being added to some communities whose infrastructure were able to handle more than one solar park . With the help of this program, IMPA achieved at least 30% low or no carbon resources by 2020 while still offering some of the lowest wholesale electric rates in the state of Indiana.

The success of IMPA’s solar program continues to thrive in recent years. In 2023, IMPA had its most prolific year yet for its solar park program as the Agency brought seven solar parks online in member communities. The agency’s largest park – at 9.9 MW – was completed, and IMPA celebrated a milestone as the Agency’s 50th solar park came online late in the year. From a small, idealistic program that started with three, 1-MW parks in 2014,

the Agency’s solar park program has grown exponentially in under 10 years. The Agency now has over 196 MW of solar power in member communities. Plans are already underway for four additional parks, and the Agency expects to surpass 209 MW of solar capacity by the end of 2025. The solar park program plays a key role in IMPA’s diverse power supply portfolio, and with its proven success rate, the Agency continues to provide a diverse fuel mix that benefits both consumers and the environment. •

Reader Feedback

The **Indiana Municipal Power Agency** (IMPA) is a not-for-profit organization that provides a low-cost, reliable, and environmentally-responsible power supply to its members. IMPA provides this wholesale power to 61 communities in Indiana and Ohio, who collectively make up the Agency's membership.

Wellness Center

-continued from page 1

wellness component. The facility will be geared toward community members of all ages and physical capabilities, partnering with the Tri-County YMCA to run classes like Rocksteady Boxing, which focuses on improving the life of people who live with Parkinson's disease. The YMCA's LIVESTRONG Program, which provides cancer survivorship support, will also play a part at the Center. Most importantly, the Center will give local residents the opportunity to meet other people, make friends, and provide a sense of community. Especially during cold winter months when skies are gray, warding off social isolation is a major component to maintaining good quality of life.

"The effort to bring a Regional Wellness Center to Jasper has been a great collaboration between multiple parties in Dubois County, as well as leaders in Perry and Spencer County," said Mayor Dean Vonderheide. "The Tri-County YMCA has played an integral role in making

this vision a reality, and feedback from the Indiana National Guard Armory, local school corporations, and Memorial Hospital has helped us align this project with the mission of local organizations to enhance community health and well-being.”

With the eventual location of the Wellness Center being nestled between Jasper High School and The Parklands, city leaders believe that the facility could also serve as an early

learning development center to help meet the need for childcare in the community.

“When we realized we could incorporate a childcare component into the Wellness Center, that really made the entire project a win-win for the community,” said Vonderheide. “Childcare is such an urgent need in communities everywhere, and this would help parents get back into the workforce knowing that their children are in a good environment. The Tri-County YMCA has a history of successfully implementing early learning programs, so we’re hoping that we’ll be able to support this need through our upcoming Wellness Center.”

While the potential for an early learning program at the site is being considered, it is not guaranteed. City leaders are currently doing their due diligence to analyze the feasibility of such a development.

Funding for the Regional Wellness Center has come from a combination of private donors, Economic Development Income Tax funding, Tax Increment Financing, and a recently implemented 1% food and beverage tax. The city is still working through the conceptual design phase, with designs hopefully being finalized by the summer. Officials plan to see construction begin by the end of 2025 or beginning of 2026 with an opening date anticipated in 2027. •

What’s the Word?

Investigating Power Terminology

Watt

A watt is a unit of measurement used to show the rate of energy transfer over one second of time. Consequently, a kilowatt is equal to 1,000 watts, a megawatt is 1 million watts, and a gigawatt equals 1 billion watts.

You may have heard of a kilowatt hour (kWh), which is a common billing unit used by most utilities in the electric industry. Essentially, a kWh simply shows the energy use per hour of an appliance, device, or entire home measured in kilowatts. For example, a space heater rated at 1.5 kWh consumes 1,500 watts of power in one hour of continuous use!

Watts are named after James Watt, an inventor and engineer born in 1736 who also created the concept of horsepower.

Cooking Corner

Meatloaf

Recipe submitted by Marcie of Richmond, Indiana

- 2 lbs hamburger
- 2 eggs
- 10 to 12 crackers (crumbled)
- 1 onion diced
- 1 tsp baking soda
- 1/2 cup milk
- 2 pkgs instant oatmeal
- 2 to 3 squirts of ketchup

Mix all ingredients well. Form into a loaf and put into a greased loaf pan. Cover with ketchup. Refrigerate for 20 to 30 minutes covered to help the loaf firm up. Preheat oven to 350 degrees. Remove loaf from refrigerator and bake in preheated oven for 1 to 1 1/2 hours.

Once meatloaf is baked, remove from oven. Let rest on top of the stove for 30 minutes before cutting into so that it won't fall apart.

This recipe serves about 4 to 6 people. Invite your friends and family over to enjoy!

What are the Benefits of Public Power?

In the last issue of the *Municipal Power News*, we asked you what some of the benefits of public power are. As a reader of this newsletter, you live in a public power community, which means the electric utility that serves your power needs is a not-for-profit utility, owned and operated by your municipality.

The benefits of public power are numerous. Here is what some of our readers had to say about the advantages of living in a public power community.

“By being a part of the community, public power utilities can boost investment in the community, support local education, and be involved with charitable programs. They also care about the overall well-being of the communities they serve.”

– Fred

“Since public utilities are nonprofit organizations, their main focus is on providing affordable services rather than maximizing profit. This often leads to lower rates for customers, as any surplus revenue is reinvested into the improvement and expansion of services. Public power

also eliminates the need for shareholders and dividends, further reducing costs. Consequently, individuals and businesses can save money on essential utilities, allowing them to allocate their resources more efficiently.”

– Chris

“There are many benefits to public power, such as being able to be provided with economic advantages. IMPA makes sure all electric needs of the community are met, as well. It boosts community investments, supports local education, and gets involved with beautification.”

– Bridgette

These are all great answers that highlight how public power improves your community to help it thrive. Additionally, public power is affordable. According to a 2021 American Public Power Association (APPA) comparison, public power customers of Indiana and Ohio typically saved an average of more than 40% when compared to other types of electric utilities. APPA also reports that nearly 80% of projects currently under construction by public power utilities are solar and wind generating sources. This shows that public power utilities also recognize the importance of environmental stewardship and continue to invest in sustainable power sources.

Public power communities, including yours, consistently work to provide low-cost, reliable, and environmentally-responsible power to their consumers.
