WAVE Program Flourishes

With nearly two full school years under their belt, the leaders and volunteers of Thorntown's no-cost youth program are proud to see all their hard work to develop such a project finally pay off. The program, We All Value Each-Other (WAVE), welcomes up to 25 children from Western Boone School Corporation on Monday and Wednesday afternoons to the second floor of the Town Hall building. Here, volunteers provide snacks, a fun activity or planned outing, a full meal, and homework help to attending students from 3:00pm to 5:30pm.

WAVE was a longtime vision of community members in town who worked to clean out and prepare the second floor of the Town Hall and gather funding to pay for much-needed upgrades to the kitchen and materials for the program. Through the years, WAVE was lucky to receive financial support from several organizations and donors, local churches and businesses, the Home National Bank. Grant opportunities awarded from Boone Co. REMC, Indiana's Juvenile Detention Alternatives Initiative (JDAI), and the Community Foundation of Boone County to name a few. In addition to monetary help, a myriad of locals, from retired teachers to high school students, have volunteered their time and labor to make the after-school program become a reality.

IMPA Celebrates 10 Years of its Solar Program

With the goal to expand the diversity of its power supply portfolio with economically feasible renewable generation sites, the Indiana Municipal Power Agency (IMPA) launched its solar program to construct solar parks within its member communities in 2014. At the time, solar power was just emerging as a cost-effective fuel resource for utilities, but IMPA embraced the challenge of incorporating this resource into its power supply portfolio to further diversify its resources and prepare for the future. Now, 10 years and 50 solar parks later, IMPA is proud of the numerous accomplishments made through its solar program and the nearly 200 megawatts of power that it contributes to all 61 member communities served by the Agency.

IMPA began its program cautiously, only constructing three demonstration solar parks in Frankton, Rensselaer, and Richmond, Indiana in its first year. Each site was housed on about eight acres of land and with 4,000 solar panels, and by the end of the year, the three sites generated 1.5 million kilowatt hours.

Through this process, IMPA expanded its knowledge of solar power and the steps needed to successfully develop parks of this scale in the most cost-effective way possible. Besides relying on in-house expertise, IMPA worked with local contractors in each of the three member communities to keep costs down and support local businesses. When construction of the three solar parks came in under budget while reliably providing environmentally-responsible electricity, IMPA and its Board of Commissioners started to envision the vast possibilities of building solar in several member communities. A spark was lit, and by 2015, six more solar parks were constructed in member communities, adding over 9 megawatts (MW) of solar capacity to the Agency's power supply portfolio.

In the ensuing years, IMPA increased its renewable footprint by building solar in collaboration with its member communities. As time progressed, so did the Agency's proficiency in constructing solar parks. By 2017, IMPA was constructing each of its solar parks with a single-axis

tracking system, allowing solar panels at each site to effectively track the movement of the sun throughout the day and generate more electricity as a result. The program continued to expand with new solar parks being constructed in member communities throughout the state, as well as additional parks being added to some communities whose infrastructure were able to handle more than one solar park . With the help of this program, IMPA achieved at least 30% low or no carbon resources by 2020 while still offering some of the lowest wholesale electric rates in the state of Indiana.

The success of IMPA’s solar program continues to thrive in recent years. In 2023, IMPA had its most prolific year yet for its solar park program as the Agency brought seven solar parks online in member communities. The agency’s largest park – at 9.9 MW – was completed, and IMPA celebrated a milestone as the Agency’s 50th solar park came online late in the year. From a small, idealistic program that started with three, 1-MW parks in 2014,

the Agency’s solar park program has grown exponentially in under 10 years. The Agency now has over 196 MW of solar power in member communities. Plans are already underway for four additional parks, and the Agency expects to surpass 209 MW of solar capacity by the end of 2025. The solar park program plays a key role in IMPA’s diverse power supply portfolio, and with its proven success rate, the Agency continues to provide a diverse fuel mix that benefits both consumers and the environment. •

Reader Feedback

The **Indiana Municipal Power Agency** (IMPA) is a not-for-profit organization that provides a low-cost, reliable, and environmentally-responsible power supply to its members. IMPA provides this wholesale power to 61 communities in Indiana and Ohio, who collectively make up the Agency's membership.

What does having reliable electricity mean to you and your family?

WAVE Program

-continued from page 1

“Our goal with WAVE is to make sure that the kids in our community know that they have a purpose,” said Angie Moody, Executive Director of WAVE who's been a part of the project since the very beginning. “Students everywhere can struggle with mental health issues, and we have had our own tragedies in our school system over the last few years. With WAVE, we want to make sure our kids have a safe environment where they know they are valued and can feel secure and confident.”

While the program mainly focuses on the students at the elementary level, Moody and volunteers hope to serve students in the 7th, 8th, and 9th grade through the summer. Last year, WAVE opened to this age group in between school years to help older students develop community through the program. Through the few sessions they had together, this group

went bowling, took a self-defense class and made ceramics at the Sugar Creek Art Center. WAVE was able to host this summer program with a grant from JDAI, so Board Members are hoping to obtain appropriate funding to launch another summer project this year.

Parent feedback of the WAVE program has been positive, with some student families mentioning that their child's grades and behavior have improved since their attendance

began. Oftentimes, high school students or tutors will volunteer their time during the after-school program to mentor attending students with homework and school projects. This helps improve the students' focus on schoolwork and many of them complete their homework before leaving.

WAVE has accomplished much in its first couple years of operation, but that's not stopping leaders of the program from looking ahead.

"Another dream of ours would be to work with Purdue Extension in Boone County to bring in high school students and help them learn life skills," said Moody. Purdue Extension – Boone County partners with local organizations to grow communities and champion education. "We'd love to help our high school students learn about subjects like finances, car maintenance, and job applications so that they feel more prepared after graduation."

As WAVE continues to thrive, the program could always use new volunteers. If you are interested in volunteering, whether it be through mentoring students or cooking meals, you can contact the program by emailing thorntownwave@gmail.com. To learn more about the program and know when enrollment periods begin, follow Thorntown's WAVE page on Facebook at www.facebook.com/profile.php?id=100076403345177!

What's the Word?

Investigating Power Terminology

Watt

A watt is a unit of measurement used to show the rate of energy transfer over one second of time. Consequently, a kilowatt is equal to 1,000 watts, a megawatt is 1 million watts, and a gigawatt equals 1 billion watts.

You may have heard of a kilowatt hour (kWh), which is a common billing unit used by most utilities in the electric industry. Essentially, a kWh simply shows the energy use per hour of an appliance, device, or entire home measured in kilowatts. For example, a space heater rated at 1.5 kWh consumes 1,500 watts of power in one hour of continuous use!

Watts are named after James Watt, an inventor and engineer born in 1736 who also created the concept of horsepower.

Cooking Corner

Meatloaf

Recipe submitted by Marcie of Richmond, Indiana

- 2 lbs hamburger
- 2 eggs
- 10 to 12 crackers (crumbled)
- 1 onion diced
- 1 tsp baking soda
- 1/2 cup milk
- 2 pkgs instant oatmeal
- 2 to 3 squirts of ketchup

Mix all ingredients well. Form into a loaf and put into a greased loaf pan. Cover with ketchup. Refrigerate for 20 to 30 minutes covered to help the loaf firm up. Preheat oven to 350 degrees. Remove loaf from refrigerator and bake in preheated oven for 1 to 1 1/2 hours.

Once meatloaf is baked, remove from oven. Let rest on top of the stove for 30 minutes before cutting into so that it won't fall apart.

This recipe serves about 4 to 6 people. Invite your friends and family over to enjoy!

What are the Benefits of Public Power?

In the last issue of the *Municipal Power News*, we asked you what some of the benefits of public power are. As a reader of this newsletter, you live in a public power community, which means the electric utility that serves your power needs is a not-for-profit utility, owned and operated by your municipality.

The benefits of public power are numerous. Here is what some of our readers had to say about the advantages of living in a public power community.

“By being a part of the community, public power utilities can boost investment in the community, support local education, and be involved with charitable programs. They also care about the overall well-being of the communities they serve.”

– Fred

“Since public utilities are nonprofit organizations, their main focus is on providing affordable services rather than maximizing profit. This often leads to lower rates for customers, as any surplus revenue is reinvested into the improvement and expansion of services. Public power

also eliminates the need for shareholders and dividends, further reducing costs. Consequently, individuals and businesses can save money on essential utilities, allowing them to allocate their resources more efficiently.”

– Chris

“There are many benefits to public power, such as being able to be provided with economic advantages. IMPA makes sure all electric needs of the community are met, as well. It boosts community investments, supports local education, and gets involved with beautification.”

– Bridgette

These are all great answers that highlight how public power improves your community to help it thrive. Additionally, public power is affordable. According to a 2021 American Public Power Association (APPA) comparison, public power customers of Indiana and Ohio typically saved an average of more than 40% when compared to other types of electric utilities. APPA also reports that nearly 80% of projects currently under construction by public power utilities are solar and wind generating sources. This shows that public power utilities also recognize the importance of environmental stewardship and continue to invest in sustainable power sources.

Public power communities, including yours, consistently work to provide low-cost, reliable, and environmentally-responsible power to their consumers.

Cook with Safety in Mind!

To many of us, cooking is such a mundane daily task that we often don't remember how dangerous it can be if things get out of hand. Prevention is always the best way to protect yourself from electric and fire hazards, so make sure you're following these tips next time you whip something up in the kitchen:

- Never leave cooking food unattended, whether on the stovetop or in a microwave
- Make sure your kitchen and bathrooms have GFCI (ground fault circuit interrupter) protected outlets
- Unplug appliances when not in use
- Make sure you have working smoke alarms and never disable a smoke alarm when cooking •
