Volume 29, Issue 1 | Spring 2024

Town Receives Community Crossings Grant

In November, the Indiana Department of Transportation (INDOT) announced that Veedersburg would receive a \$433,285 Community Crossings grant for the purpose of rehabilitating streets in the community. INDOT's Community Crossings program was established in 2016 and partners with Hoosier communities to finance improvements on roads and bridges in Indiana communities. Strengthening local transportation networks can help these communities bring on economic development opportunities, create jobs, and make towns and cities safer for their residents.

The funding from this grant will go toward street repairs on State Street, from Columbia Street to west side town limits.

"We're always keeping an eye out for grant opportunities to improve the town's utilities, and the Community Crossings Program has been a big help," said Veedersburg clerk-treasurer Kristin Allen. "Over the years, we've received over \$2.2 million from INDOT through Community Crossings, and we plan to continue utilizing funds from this program to the best of our ability. The project to work on State Street

IMPA Celebrates 10 Years of its Solar Program

With the goal to expand the diversity of its power supply portfolio with economically feasible renewable generation sites, the Indiana Municipal Power Agency (IMPA) launched its solar program to construct solar parks within its member communities in 2014. At the time, solar power was just emerging as a cost-effective fuel resource for utilities, but IMPA embraced the challenge of incorporating this resource into its power supply portfolio to further diversify its resources and prepare for the future. Now, 10 years and 50 solar parks later, IMPA is proud of the numerous accomplishments made through its solar program and the nearly 200 megawatts of power that it contributes to all 61 member communities served by the Agency.

IMPA began its program cautiously, only constructing three demonstration solar parks in Frankton, Rensselaer, and Richmond, Indiana in its first year. Each site was housed on about eight acres of land and with 4,000 solar panels, and by the end of the year, the three sites generated 1.5 million kilowatt hours.

Through this process, IMPA expanded its knowledge of solar power and the steps needed to successfully develop parks of this scale in the most cost-effective way possible. Besides relying on in-house expertise, IMPA worked with local contractors in each of the three member communities to keep costs down and support local businesses. When construction of the three solar parks came in under budget while reliably providing environmentally-responsible electricity, IMPA and its Board of Commissioners started to envision the vast possibilities of building solar in several member communities. A spark was lit, and by 2015, six more solar parks were constructed in member communities, adding over 9 megawatts (MW) of solar capacity to the Agency's power supply portfolio.

In the ensuing years, IMPA increased its renewable footprint by building solar in collaboration with its member communities. As time progressed, so did the Agency's proficiency in constructing solar parks. By 2017, IMPA was constructing each of its solar parks with a single-axis

tracking system, allowing solar panels at each site to effectively track the movement of the sun throughout the day and generate more electricity as a result. The program continued to expand with new solar parks being constructed in member communities throughout the state, as well as additional parks being added to some communities whose infrastructure were able to handle more than one solar park . With the help of this program, IMPA achieved at least 30% low or no carbon resources by 2020 while still offering some of the lowest wholesale electric rates in the state of Indiana.

The success of IMPA’s solar program continues to thrive in recent years. In 2023, IMPA had its most prolific year yet for its solar park program as the Agency brought seven solar parks online in member communities. The agency’s largest park – at 9.9 MW – was completed, and IMPA celebrated a milestone as the Agency’s 50th solar park came online late in the year. From a small, idealistic program that started with three, 1-MW parks in 2014,

the Agency’s solar park program has grown exponentially in under 10 years. The Agency now has over 196 MW of solar power in member communities. Plans are already underway for four additional parks, and the Agency expects to surpass 209 MW of solar capacity by the end of 2025. The solar park program plays a key role in IMPA’s diverse power supply portfolio, and with its proven success rate, the Agency continues to provide a diverse fuel mix that benefits both consumers and the environment. •

Reader Feedback

The **Indiana Municipal Power Agency** (IMPA) is a not-for-profit organization that provides a low-cost, reliable, and environmentally-responsible power supply to its members. IMPA provides this wholesale power to 61 communities in Indiana and Ohio, who collectively make up the Agency's membership.

is planned to take place this spring or early summer, so we're looking forward to seeing that progress."

Veedersburg isn't the only nearby community to benefit from the program, either. The nearby communities of Attica and Williamsport were given funding as well. These local successes show that the INDOT program is imperative for the infrastructure of many Hoosier communities.

As a town with fewer than 10,000 residents, Veedersburg will only be required to match 25% of the project costs that come about as a result of INDOT's award—a comparatively phenomenal rate to other matching grant programs. The town joins over 180 other towns, cities, and counties on the list of recipients, who altogether received over \$91.5 million in funding.

The Community Crossings grant plays a large part in Governor Eric Holcomb's overall

Tentative Town Clean-up

Veedersburg is hoping to host another town clean-up day this May, so keep your eyes peeled for further information as we get closer to the month. You can always check www.veedersburg.in.gov/events to see what events are coming up in your town!

Next Level Agenda development plan, which focuses on economic development, education, public health, community development, and government service.

“Community Crossings continues to provide opportunities for Indiana local communities, large and small, to make connectivity and safety road improvements for Hoosier families and our visitors,” said Governor Holcomb in a news release by INDOT.

“The importance of this matching grant program is immediately obvious as we take our award-winning statewide infrastructure network to the next level.”

INDOT continually seeks to maintain and improve more than 29,000 lane miles of highways, 5,700 bridges, 4,500 rail miles, and 127 aviation facilities across the state of Indiana. To learn more about the Agency, visit www.in.gov/indot.

What's the Word?

Investigating Power Terminology

Watt

A watt is a unit of measurement used to show the rate of energy transfer over one second of time. Consequently, a kilowatt is equal to 1,000 watts, a megawatt is 1 million watts, and a gigawatt equals 1 billion watts.

You may have heard of a kilowatt hour (kWh), which is a common billing unit used by most utilities in the electric industry. Essentially, a kWh simply shows the energy use per hour of an appliance, device, or entire home measured in kilowatts. For example, a space heater rated at 1.5 kWh consumes 1,500 watts of power in one hour of continuous use!

Watts are named after James Watt, an inventor and engineer born in 1736 who also created the concept of horsepower.

Cooking Corner

Meatloaf

Recipe submitted by Marcie of Richmond, Indiana

- 2 lbs hamburger
- 2 eggs
- 10 to 12 crackers (crumbled)
- 1 onion diced
- 1 tsp baking soda
- 1/2 cup milk
- 2 pkgs instant oatmeal
- 2 to 3 squirts of ketchup

Mix all ingredients well. Form into a loaf and put into a greased loaf pan. Cover with ketchup. Refrigerate for 20 to 30 minutes covered to help the loaf firm up. Preheat oven to 350 degrees. Remove loaf from refrigerator and bake in preheated oven for 1 to 1 1/2 hours.

Once meatloaf is baked, remove from oven. Let rest on top of the stove for 30 minutes before cutting into so that it won't fall apart.

This recipe serves about 4 to 6 people. Invite your friends and family over to enjoy!

What are the Benefits of Public Power?

In the last issue of the *Municipal Power News*, we asked you what some of the benefits of public power are. As a reader of this newsletter, you live in a public power community, which means the electric utility that serves your power needs is a not-for-profit utility, owned and operated by your municipality.

The benefits of public power are numerous. Here is what some of our readers had to say about the advantages of living in a public power community.

“By being a part of the community, public power utilities can boost investment in the community, support local education, and be involved with charitable programs. They also care about the overall well-being of the communities they serve.”

– Fred

“Since public utilities are nonprofit organizations, their main focus is on providing affordable services rather than maximizing profit. This often leads to lower rates for customers, as any surplus revenue is reinvested into the improvement and expansion of services. Public power

also eliminates the need for shareholders and dividends, further reducing costs. Consequently, individuals and businesses can save money on essential utilities, allowing them to allocate their resources more efficiently.”

– Chris

“There are many benefits to public power, such as being able to be provided with economic advantages. IMPA makes sure all electric needs of the community are met, as well. It boosts community investments, supports local education, and gets involved with beautification.”

– Bridgette

These are all great answers that highlight how public power improves your community to help it thrive. Additionally, public power is affordable. According to a 2021 American Public Power Association (APPA) comparison, public power customers of Indiana and Ohio typically saved an average of more than 40% when compared to other types of electric utilities. APPA also reports that nearly 80% of projects currently under construction by public power utilities are solar and wind generating sources. This shows that public power utilities also recognize the importance of environmental stewardship and continue to invest in sustainable power sources.

Public power communities, including yours, consistently work to provide low-cost, reliable, and environmentally-responsible power to their consumers.

Veedersburg Pool Opening Date

The weather is warming up and town leaders are ready to dive into summer fun by planning the community pool's opening on May 25th. Get your sunscreen and beach towels ready for this year's opening!

As always, the temperature must be at least 70 degrees for the pool to open, and the pool closes in the event of any thunder and/or lightning. Check the town's website at www.veedersburg.in.gov for more information on hours, admission fees, and rentals! •
