Jamestown in Path of 2024 Solar Eclipse

Mark your calendars for an important date this spring! On the afternoon of April 8, Jamestown will be in the path of totality for the 2024 solar eclipse across North America. While millions of tourists from across the world are anticipated to visit the state to take part in the event, Jamestown residents are poised to witness the rare occurrence from the comfort of their own back yards.

A complete solar eclipse happens when the moon passes between the Sun and the Earth at such a particular angle that it completely blocks the face of the Sun from viewers on Earth. Partial solar eclipses, where the moon only covers a portion of the Sun's face, occur about twice a year in different parts of the world, with Indiana having its most recent partial eclipse in October of 2023. However, total solar eclipses are more rare, happening approximately once every 1.5 years. While that may sound relatively frequent, a solar eclipse crosses any one point on the Earth's surface about once in every 375 years.

Not only are total solar eclipses rare to experience, but they are also a unique cosmic event. Out of all the moons and planets in our solar system, Earth is the only planet that even experiences total solar eclipses. According to the American

Saving Energy in Cold Weather

Read the various ways that readers of this newsletter save energy in the cold.

Winter Safety with IMPA!

The winter season is upon us, and while it is the least favorite time of year for many, preparing for the cold can help things go over a bit more smoothly. Use this time to remind yourself and your loved ones about the following safety tips that will help everyone enjoy the time to come as best as they can.

Driving

- Drive slowly and attentively in icy or snowy conditions. Give yourself plenty of time to get to your destination.
- Keep your vehicle's gas tank as full as possible throughout the winter season. This can prevent your fuel lines from freezing, which can result in your car not starting.
- Dress warmly and keep an extra set of clothes and blankets in the car.
- Avoid using backroads, as major streets and highways will have better clearance in bad conditions.

Avoiding Fires

- Never plug a space heater into an extension cord or power strip - only plug them directly into an outlet.
- Never leave a space heater, lit fireplace, or candles unattended for long periods of time.
- Portable generators can be great during a winter power outage, but keep in mind that they pose fire and carbon monoxide poisoning risks. Never run a generator indoors or in enclosed areas, and keep fuel containers away from heating devices.

Snow Removal

- Before going outside to clear snow from a driveway or walkway, be sure to stretch just like you would before regular exercise.
- When shoveling snow, be sure to stay hydrated and avoid overexertion. Take frequent breaks to let your body rest, as cold weather can put a unique strain on your heart and lungs.
- Keep dry while working outside with snow. Wet clothes will make your body lose heat faster.

How Does Public Power Work?

The transmission lines stretching across the country carry electricity to households and businesses nationwide. However, some of the electricity travels to customers served by investor-owned utilities (IOUs) or rural electric cooperatives (REMCs), while other households like yours are served by a public power utility. Your community, as a member of the Indiana Municipal Power Agency (IMPA), buys its electricity from the Agency before selling it to you and bringing it to your door. The electricity that your community purchases is called wholesale power—it is supplied to your local public power utility for resale to retail customers of the utility. By purchasing wholesale power in bulk, the member utilities of IMPA are able to provide electricity with the economic advantages than if they were to individually generate the power themselves or purchase it elsewhere. Your community takes advantage of this benefit, since all 61 member communities of IMPA work together to purchase power in bulk through the Agency.

Member utilities of IMPA have contracts with the Agency to ensure that all the electric needs of the community are met. IMPA, by either generating power at a

generation facility or purchasing it from other utilities, places the power on the electric grid through transmission lines.

The high voltage electricity travels across the grid on these transmission lines to your community. Before the electricity gets to your residence, a substation transformer is used to lower the voltage of the electricity to make it safer to travel across shorter distances than the transmission lines cover. This lower voltage also makes it safer for the electricity to be in closer proximity to traffic and people. Once electricity goes through the transformer in the substation, it moves through distribution lines in your local community to a transformer at homes and businesses. It then arrives at your home and allows you to turn on the lights, heat your home, and watch tv.

Public power utilities are not just there to provide power – they work for the betterment of the community, too. These utilities are embedded in the fabric of their communities—boosting community investment, supporting local education, and getting involved with beautification and charitable programs. As a result, public power customers benefit from affordable energy, better service, local control, and a utility that cares about the overall well-being and growth of your community. •

At IMPA Board Meetings, a representative from your community helps guide the direction and decisions of the Agency.

Tidbits & Trivia

The **Indiana Municipal Power Agency** (IMPA) is a not-for-profit organization that provides a low-cost, reliable, and environmentally-responsible power supply to its members. IMPA provides this wholesale power to 61 communities in Indiana and Ohio, who collectively make up the Agency's membership.

What are some of the benefits of public power?

Send your answer to newsletter@impa.com, along with your name, e-mail address, and address for a chance to win an energy efficiency prize pack!

2024 Solar Eclipse

-continued from page 1

Astronomical Society, though there are more than 200 moons orbiting six planets in our solar system, our moon is the only one that is perfect sized and distanced from its planet to block the sun's face.

It's been since 1205 that much of east central Indiana was in the path of totality, so the event is cause for much celebration. And Hoosiers won't be the only ones celebrating. Each time a total solar eclipse occurs on Earth, tourists, ranging from photographers to astronomers, journalists, new age spiritualists, and alien enthusiasts travel far and wide to participate in the event. Indiana's tourism industry can expect a significant boost this spring as a result of the millions that are expected to flood the state in anticipation of the eclipse.

Though residents in Jamestown won't have to prepare much with the path of totality

directly passing through the town, be sure that you have a few things in mind to be ready for the solar eclipse. The event is expected to last for approximately 3 minutes and 46 seconds in east central Indiana, so it's important to be aware of timing. The beginning of totality will start around 3:06pm on April 8, darkening the sky enough to feel as though it's about dusk. During the eclipse, you can expect to hear birds and insects chirping, and some of the

brighter stars and planets in the sky may even become visible! The magic of the moment is said to be indescribable, so keep an eye on your clock that day and don't miss out.

Most importantly, prepare to keep you and your loved ones safe while viewing the total solar eclipse. Just like any other day, it is incredibly dangerous to look at the sun, so special eyewear is required to enjoy the eclipse. Eclipse glasses, which can be purchased from a variety of retailers online and in stores, are appropriate safe viewing of the event. Additionally, it is recommended to purchase eclipse glasses that are recognized as trustworthy by the American Astronomical Society (AAS). A list of reliable vendors can be found on the AAS's website at <https://eclipse.aas.org/resources/solar-filters>.

Take a look at some of these additional tips to remember when you enjoy the solar eclipse this April:

- Inspect your eclipse glasses to ensure there are no scratches, rips, or damage.
- Never look at the sun through a camera or telescope, even with eclipse glasses on.
- Only when the moon completely obscures the sun during the eclipse are you able to remove your eclipse glasses to view the event. As soon as the sun begins to reappear, put your safety glasses on immediately.

Check out page 8 for information on local solar eclipse events!

What's the Word?

Investigating Power Terminology

Distribution Lines

Utilities use distribution lines to transport electricity from the larger transmission system to individual customer homes and businesses. While transmission lines carry electricity across long distances at a high

voltage, distribution lines carry electricity over shorter distances at a lower voltage. You may see transmission lines while driving on a highway, but the utility lines you see on the streets of your community are distribution lines.

Distribution lines bring electricity to its final stage of delivery. As a member of a public power utility, your town or city owns and operates the distribution lines in your community.

- 2 large eggs
- $\frac{3}{4}$ cup skim milk
- $\frac{1}{4}$ cup orange juice
- 1 $\frac{3}{4}$ cups eggnog
- $\frac{1}{2}$ cup canola oil
- 1 tbsp grated orange zest
- 4 $\frac{3}{4}$ cups all-purpose flour
- $\frac{3}{4}$ cup sugar
- 2 tbsp baking powder
- $\frac{1}{2}$ tsp salt
- 1 tsp ground cinnamon
- 1 tsp ground nutmeg
- $\frac{3}{4}$ cup dried cranberries
- $\frac{3}{4}$ cup chopped macadamia nuts

Preheat oven to 350°F. Whisk wet ingredients together with orange zest in a bowl. In another bowl, combine all dry ingredients except for cranberries and macadamia nuts. Add the liquid mixture to the dry mixture, carefully stirring until the flour is moistened. Fold in cranberries and nuts. Grease and flour 2 loaf pans and pour in batter. Bake for 50-60 minutes, or until a toothpick inserted comes out clean. Cool in pans for 10 minutes, then remove wire racks to cool completely. Slice and serve with orange marmalade. Or, to serve without a spread, use the glaze below.

In a small bowl, mix:
- 1 tbsp eggnog
- $\frac{3}{8}$ cup confectioner's sugar

Drizzle mixture over the cooled loaves

How Do I Save Energy in Cold Weather?

Last year, we asked readers of the *Municipal Power News* some of the methods they use to reduce energy consumption in cold weather. Here is what some of you said!

“I have reduced my energy consumption due to my purchase of long cloth door tubes that resemble snakes. They are the draft prevention cloth tubes approximately 36” x 3 1/2” filled with beans or double tubes with center strips. They can be placed in the home at the bottom of outside doors or where drafts enter under doors inside a home. The double tube style can slide under

the storm door outside the house door---one tube outside the storm door and the other tube set between the storm door and the inside house door. These can also be used on doors in cold rooms with closed doors to stop drafts. This is really great in blocking cold air at the floor level that cause cold feet and drafts.”

- Jean

“I often use an infrared/radiant space heater that is thermostat-controlled. During the day I close off unused rooms so my living room/kitchenette is comfortably warm. The glow of the radiant heater is pleasing like a fireplace. You definitely need to wear insulated slippers or plush socks indoors in

addition to layered clothing. Wearing indoor weather-appropriate clothing, I can keep my heater set on a lower temperature—generally less than 65 degrees. My furnace, in comparison, needs to be set at 70+ degrees to maintain satisfactory room warmth.”

- Penny

“During the cold weather months, the most effective method for reducing my energy consumption is by closing off rooms that do not necessarily have to be heated all day. I also put plastic on any drafty windows and use draft stoppers for my doors. I’ve replaced

most of my home’s light bulbs with energy efficient LED bulbs and I change my furnace filter often. Room darkening curtains help keep the heat in and as the famous saying goes, I never let the water run!”

- Tiffany

“The method that I use most is to wear warmer clothes in the house. I know that there are people who want to sit around the house in shorts and t-shirts, and run around the house in bare feet, all the while having

their thermostat turned way up. That makes no sense to me. Today, for instance, it’s 14° outside. The thermostat is set at 68° inside. I’m wearing a flannel shirt with a puffy vest, long pants, and shoes.”

Jamestown Solar Eclipse Event

The Jamestown Community Partnership and other Jamestown organizations would like to come together to celebrate a rare event, a full solar eclipse and Jamestown is in the path of totality. Our local organizations will be providing many activities for all ages during this event. From glow-in-the-dark kickball, face painting, music, to glowing, flying objects launched into the sky. The eclipse celebration will provide fellowship and something fun for the whole family to enjoy. Eclipse glasses will be provided to all attendees to view the event that has not happened in central Indiana for over 800 years!

This event will be taking place Monday, April 8th, 2024 from 1:00 pm to 5:00 pm at the Jamestown Christian Church. There will be plenty of parking and room for all.

Please, mark your calendar and bring a chair, we hope to see all there!
