Town of Pittsboro

Volume 28, Issue 3 | Winter 2023

Are You Ready if the Power Goes Out?

As your municipally-owned electric utility, Pittsboro's electric department performs routine maintenance and electric system upgrades to keep the town's reliability as consistent as possible. However, unforeseen circumstances can always occur and cause power interruptions, especially as winter can bring unpredictable weather conditions. Your local utility wants to make sure that you and your family are prepared for those unpredictable situations when the power goes out.

One thing your utility highly recommends is creating a power outage kit—a collection of supplies that can help you through a prolonged outage. See how many items you have on the power outage kit checklist:

- Water—one gallon per person (or animal!) in your household is recommended
- Flashlights or battery-operated lanterns and appropriate batteries
- A first aid kit
- Non-perishable food items
- A cooler, in case you need to move food from your refrigerator to keep it safe
- A weather radio
- Portable phone chargers

Saving Energy in Cold Weather

Read the various ways that readers of this newsletter save energy in the cold.

Winter Safety with IMPA!

The winter season is upon us, and while it is the least favorite time of year for many, preparing for the cold can help things go over a bit more smoothly. Use this time to remind yourself and your loved ones about the following safety tips that will help everyone enjoy the time to come as best as they can.

Driving

- Drive slowly and attentively in icy or snowy conditions. Give yourself plenty of time to get to your destination.
- Keep your vehicle's gas tank as full as possible throughout the winter season. This can prevent your fuel lines from freezing, which can result in your car not starting.
- Dress warmly and keep an extra set of clothes and blankets in the car.
- Avoid using backroads, as major streets and highways will have better clearance in bad conditions.

Avoiding Fires

- Never plug a space heater into an extension cord or power strip - only plug them directly into an outlet.
- Never leave a space heater, lit fireplace, or candles unattended for long periods of time.
- Portable generators can be great during a winter power outage, but keep in mind that they pose fire and carbon monoxide poisoning risks. Never run a generator indoors or in enclosed areas, and keep fuel containers away from heating devices.

Snow Removal

- Before going outside to clear snow from a driveway or walkway, be sure to stretch just like you would before regular exercise.
- When shoveling snow, be sure to stay hydrated and avoid overexertion. Take frequent breaks to let your body rest, as cold weather can put a unique strain on your heart and lungs.
- Keep dry while working outside with snow. Wet clothes will make your body lose heat faster.

How Does Public Power Work?

The transmission lines stretching across the country carry electricity to households and businesses nationwide. However, some of the electricity travels to customers served by investor-owned utilities (IOUs) or rural electric cooperatives (REMCs), while other households like yours are served by a public power utility. Your community, as a member of the Indiana Municipal Power Agency (IMPA), buys its electricity from the Agency before selling it to you and bringing it to your door. The electricity that your community purchases is called wholesale power—it is supplied to your local public power utility for resale to retail customers of the utility. By purchasing wholesale power in bulk, the member utilities of IMPA are able to provide electricity with the economic advantages than if they were to individually generate the power themselves or purchase it elsewhere. Your community takes advantage of this benefit, since all 61 member communities of IMPA work together to purchase power in bulk through the Agency.

Member utilities of IMPA have contracts with the Agency to ensure that all the electric needs of the community are met. IMPA, by either generating power at a

generation facility or purchasing it from other utilities, places the power on the electric grid through transmission lines.

The high voltage electricity travels across the grid on these transmission lines to your community. Before the electricity gets to your residence, a substation transformer is used to lower the voltage of the electricity to make it safer to travel across shorter distances than the transmission lines cover. This lower voltage also makes it safer for the electricity to be in closer proximity to traffic and people. Once electricity goes through the transformer in the substation, it moves through distribution lines in your local community to a transformer at homes and businesses. It then arrives at your home and allows you to turn on the lights, heat your home, and watch tv.

Public power utilities are not just there to provide power – they work for the betterment of the community, too. These utilities are embedded in the fabric of their communities—boosting community investment, supporting local education, and getting involved with beautification and charitable programs. As a result, public power customers benefit from affordable energy, better service, local control, and a utility that cares about the overall well-being and growth of your community. •

At IMPA Board Meetings, a representative from your community helps guide the direction and decisions of the Agency.

Tidbits & Trivia

The **Indiana Municipal Power Agency** (IMPA) is a not-for-profit organization that provides a low-cost, reliable, and environmentally-responsible power supply to its members. IMPA provides this wholesale power to 61 communities in Indiana and Ohio, who collectively make up the Agency's membership.

What are some of the benefits of public power?

Are You Ready if the Power Goes Out?

-continued from page 1

Having an emergency preparedness kit with these items makes dealing with an outage much easier. In the event of an outage, the first thing you should do is gather everyone in the home to ensure everyone is safe, then distribute lights and equipment that may be needed from the kit. Next, let the town know that you are experiencing a power outage by calling their office at (317) 892-3326.

Once the utility is aware of your situation, it's advisable to unplug all of your electronic devices from outlets to prevent potential damage from a power surge once electricity is restored. An unopened refrigerator can stay cold for up to four hours, but if an outage goes beyond this limit, be

sure to store perishable food items in your cooler. If you have a generator for backup power, always run it outdoors and away from windows to prevent carbon monoxide poisoning. While candles are a nice source of lighting during a power outage, be sure to use them safely and never leave a lit candle unattended.

Investigating Power Terminology

Distribution Lines

Utilities use distribution lines to transport electricity from the larger transmission system to individual customer homes and businesses. While transmission lines carry electricity across long distances at a high

voltage, distribution lines carry electricity over shorter distances at a lower voltage. You may see transmission lines while driving on a highway, but the utility lines you see on the streets of your community are distribution lines.

Distribution lines bring electricity to its final stage of delivery. As a member of a public power utility, your town or city owns and operates the distribution lines in your community.

newsletter@impa.com

- 2 large eggs
- $\frac{3}{4}$ cup skim milk
- $\frac{1}{4}$ cup orange juice
- 1 $\frac{3}{4}$ cups eggnog
- $\frac{1}{2}$ cup canola oil
- 1 tbsp grated orange zest
- 4 $\frac{3}{4}$ cups all-purpose flour
- $\frac{3}{4}$ cup sugar
- 2 tbsp baking powder
- $\frac{1}{2}$ tsp salt
- 1 tsp ground cinnamon
- 1 tsp ground nutmeg
- $\frac{3}{4}$ cup dried cranberries
- $\frac{3}{4}$ cup chopped macadamia nuts

Preheat oven to 350°F. Whisk wet ingredients together with orange zest in a bowl. In another bowl, combine all dry ingredients except for cranberries and macadamia nuts. Add the liquid mixture to the dry mixture, carefully stirring until the flour is moistened. Fold in cranberries and nuts. Grease and flour 2 loaf pans and pour in batter. Bake for 50-60 minutes, or until a toothpick inserted comes out clean. Cool in pans for 10 minutes, then remove wire racks to cool completely. Slice and serve with orange marmalade. Or, to serve without a spread, use the glaze below.

In a small bowl, mix:

- 1 tbsp eggnog
- $\frac{3}{8}$ cup confectioner's sugar

Drizzle mixture over the cooled loaves

How Do I Save Energy in Cold Weather?

Last year, we asked readers of the *Municipal Power News* some of the methods they use to reduce energy consumption in cold weather. Here is what some of you said!

“I have reduced my energy consumption due to my purchase of long cloth door tubes that resemble snakes. They are the draft prevention cloth tubes approximately 36” x 3 1/2” filled with beans or double tubes with center strips. They can be placed in the home at the bottom of outside doors or where drafts enter under doors inside a home. The double tube style can slide under

the storm door outside the house door---one tube outside the storm door and the other tube set between the storm door and the inside house door. These can also be used on doors in cold rooms with closed doors to stop drafts. This is really great in blocking cold air at the floor level that cause cold feet and drafts.”

- Jean

“I often use an infrared/radiant space heater that is thermostat-controlled. During the day I close off unused rooms so my living room/kitchenette is comfortably warm. The glow of the radiant heater is pleasing like a fireplace. You definitely need to wear insulated slippers or plush socks indoors in

addition to layered clothing. Wearing indoor weather-appropriate clothing, I can keep my heater set on a lower temperature—generally less than 65 degrees. My furnace, in comparison, needs to be set at 70+ degrees to maintain satisfactory room warmth.”

- Penny

“During the cold weather months, the most effective method for reducing my energy consumption is by closing off rooms that do not necessarily have to be heated all day. I also put plastic on any drafty windows and use draft stoppers for my doors. I’ve replaced

most of my home’s light bulbs with energy efficient LED bulbs and I change my furnace filter often. Room darkening curtains help keep the heat in and as the famous saying goes, I never let the water run!”

- Tiffany

“The method that I use most is to wear warmer clothes in the house. I know that there are people who want to sit around the house in shorts and t-shirts, and run around the house in bare feet, all the while having

their thermostat turned way up. That makes no sense to me. Today, for instance, it’s 14° outside. The thermostat is set at 68° inside. I’m wearing a flannel shirt with a puffy vest, long pants, and shoes.”

Save on Energy Through the Winter

While temperatures trend downward this season, some residents and businesses may see their electric use go up. Luckily, since Pittsboro's electric utility is a public power utility and a member of the Indiana Municipal Power Agency, your community already provides you with some of the best electric rates in Indiana. As outside temperatures plunge, you can take the following energy-saving measures to save even more on your utility rates.

- Find and seal any air leaks you feel coming from cracks or gaps in windows and doorways.
- Take advantage of sunlight and open curtains on south-facing windows during the day to help warm your home.
- Replace furnace and heat pump air handler filters monthly for the best efficiency.
- Set your water heater to a warm setting at approximately 120°F. •
