IMPA Service Corp Keeps Lights On

lectricity is essential to modern life, so Coatesville town leaders understand the importance of a reliable power supply in the community. Since Coatesville's utility is a public power utility—meaning it is a not-for-profit entity that is owned and operated by the town—Coatesville officials prioritize the safe and effective delivery of electricity to all residents and business owners. By ensuring regular maintenance like tree trimming and equipment replacement is completed each year, town leaders consistently strive to ensure that Coatesville's power system runs smoothly.

However, no matter how much preventive care is performed to electric infrastructure. power outages can still happen, whether caused by heavy storms or unanticipated equipment failures. Even when the lights go out, Coatesville's utility is ready to respond and restore electricity as quickly as possible. One way that the town has committed to staying reliable is through their recently implemented Advanced Metering Infrastructure (AMI). This AMI system alerts utility officials immediately when there are power interruptions or outages along Coatesville's system, and the software accurately pinpoints the location of such issues. With this useful tool at hand, town leaders begin working almost immediately

40 Years of the Indiana Municipal Power Agency

he Indiana Municipal Power Agency (IMPA) began with a single idea to enable municipally-owned utilities to join and share power resources for a more reliable and cost-effective future. Before the formation of the Agency, individual municipal utilities in Indiana only had limited access to power supply options, and their small size kept them vulnerable to the changing energy market. However, the founders of IMPA believed in the adage of "strength in numbers," and sought to withstand these challenges by working together. In 1979, representatives of 11 Indiana municipallyowned utilities organized themselves into a Joint Action Committee to investigate the feasibility of uniting into a joint action agency, which would allow them to share generation resources and bulk purchase power at a mutually beneficial low cost.

By 1980, Indiana state legislation was passed allowing the 11 representative communities to unite in the purchase of

Some of the founders of IMPA

wholesale electric power and transmission services, as well as issue bonds to pay for the cost of projects. This allowed the formation of the Indiana Municipal Power Agency, which had its first operating year in 1983—40 years ago.

In four decades. IMPA has been through a vast number of changes, but has always remained true to its strong founding mission of providing a low-cost, reliable, and environmentally-responsible power supply to its members. Through the vears, the Agency's membership has grown from 11 Hoosier communities to 61 towns. cities, and villages in Indiana and Ohio. The Agency has also grown to offer services beyond power supply, including economic development assistance, marketing and communications support, and government relations work. IMPA also formed its operations and engineering subsidiary— IMPA Service Corp—in 2001 to provide a cost-effective resource for members regarding engineering work, rate studies, and electric system management. These services continue to strengthen IMPA's membership for the betterment of public power utility customers across the Midwest.

IMPA initially began in 1983 with 24.95% ownership in a coal-fired baseload generating facility called Gibson 5 in southwestern Indiana. As the Agency's membership grew throughout the decades, IMPA would come to acquire additional power supply resources to support its

members and incorporate diverse fuel types into its portfolio. By 2023, IMPA has added seven combustion turbines operated primarily on natural gas, four with fuel oil backup for reliability, to its resources, as well as joint-ownership in other coalfired power plants in Kentucky and Illinois. The Agency has also incorporated power purchase agreements of nuclear, wind, and solar power into its power supply portfolio.

Since 2014, IMPA has also developed its own solar power program—constructing 44 solar parks in member communities throughout Indiana. This solar park initiative has played an integral role in building the renewable portion of IMPA's portfolio and diversifying resources to the benefit of all members. Moving forward, IMPA is working toward a projected energy portfolio made up of 46% no-carbon resources by 2026. As environmental regulations continually change, and as older generation units near their end-of-life expectancy, the shift is a necessity for the Agency's future success.

Forty years ago, the founders of IMPA provided the building blocks for a resilient foundation, and this foundation remains strong. IMPA as an Agency today has truly been formed by its history — the visionaries

that created the Agency, the decisions that shaped the Agency's operations, and the evolution of IMPA's service and power supply over time. As the Agency embarks on its next 40 years of existence, IMPA will continue to write its own story and history as the Agency adapts for future generations. •

IMPA Adds 75 MW of Wind Power

his June, Alta Farms wind farm in DeWitt County, Illinois, announced it began operations to produce renewable wind power. IMPA previously signed a power purchase agreement with the wind farm's developer, Enel North America, for 75 megawatts of power, which has

now been added to the Agency's power supply portfolio.

IMPA continues to build upon its historic foundation with wise investments in the Agency's power supply portfolio, ensuring that its members will always have their everchanging electric needs met.

Tidbits & Trivia

The Indiana Municipal Power Agency (IMPA) is a not-for-profit organization that provides a low-cost, reliable, and environmentally-responsible power supply to its members. IMPA provides this wholesale power to 61 communities in Indiana and Ohio, who collectively make up the Agency's membership.

to restore power once an outage has been detected.

Oftentimes, the town gets assistance from its wholesale public power provider, the Indiana Municipal Power Agency (IMPA), to actually bring power back on. IMPA's operations subsidiary, IMPA Service Corp, has a professional crew of lineworkers who are able to provide restoration services to members like Coatesville when needed. During two back-to-back power outages this summer, IMPA Service Corp crews traveled to Coatesville to complete equipment repairs and restore power to the community.

"IMPA Service Corp's line crews are just phenomenal," said Ron Slover, Coatesville clerktreasurer and IMPA Commissioner. Slover plays a vital communication role whenever power outages occur in Coatesville, alerting IMPA

Service Corp or other necessary entities to get the lights back on. "Over a recent weekend in July, we had a line fuse blow and weld itself shut, leaving up to 100 customers without power. IMPA's lineworkers came to the rescue in no time. Then, just a day later, another line fuse came apart, and IMPA Service Corp had to come out again to restore power to about 129 folks. Luckily, their response times are great, so we were able to get power back both times

Follow IMPA on Social Media! Indiana Municipal Power Agency @impapower @impaPower Indiana Municipal Power Agency

as soon as possible. They will always be the first that we call when we have power issues because of how great they've been to us."

IMPA and IMPA Service Corp are proud to help communities such as Coatesville achieve their mission in providing a low-cost, reliable, and environmentally responsible power supply to its customers. To learn more about how public power utilities work together to achieve these goals, visit www.impa.com! •

What's the Word?

Circuit Breaker

A circuit breaker is a safety device typically used in homes to interrupt the flow of electricity whenever the current level gets too high. These devices are vital in preventing house fires or other electrical hazards caused by wiring problems or equipment failures.

Typically, homes have a circuit breaker panel, which acts as the control system for the electricity in a house. Here, you can use switch controls to alter the distribution of power around your home.

While circuit breaker panels are intentionally built for easy access and use, always call a professional if you need breaker modifications, or if you are in doubt about anything. It's always best to prioritize safety when it comes to electricity!

Cooking Corner

Darlington High School Pizza Burgers

Recipe submitted by Martha of New Ross, Indiana

- 1 lb hamburger
- 1/2 lb bologna
- 1 1/2 cups pizza sauce
- Italian seasoning to taste
- Salt and Pepper
- 1/2 tsp garlic powder
- 4-8 oz pizza cheese
- 1 dozen hamburger buns

Mix hamburger and bologna. Chop bologna in food processor. Brown until hamburger is no longer pink. Add salt, pepper, garlic, and italian seasoning. Stir in pizza sauce. Should not be too wet. Let cool slightly. Add cheese and spoon onto half of a bun. Bake 350 until hot. May add more cheese on top. Makes 2 dozen.

Apple Dumplings

Recipe submitted by Jamie of Linton, Indiana

- 2 cans crescent rolls
- 2 large Granny Smith apples
- 11/2 sticks butter

- 11/2 cups sugar
- 1 tsp cinnamon
- 1 cup Mountain Dew

Cut apples into 8 slices each and wrap each slice into a crescent roll. Mix butter, sugar and cinnamon; bring to a boil then spoon over rolls. Pour on Mountain Dew next. Some people will add the Mountain Dew in with the butter, sugar and cinnamon. Bring to a boil. Bake at 350 degrees for 45 minutes.

The Benefits of Electric Vehicles

n the last issue of the Municipal Power News, we asked readers to share some of the advantages of driving an electric car rather than a traditional gas powered vehicle. We received a number of great comments from our readers—check out what some of you said!

"One significant benefit of driving an electric vehicle (EV) over a gas-powered car is the cost savings associated with fuel and maintenance. Electric vehicles are more energy-efficient, allowing drivers to cover more miles per unit of energy compared to internal combustion engine vehicles. With electricity generally being cheaper than gasoline, EV owners can save significantly on fuel costs over time. Furthermore, electric vehicles have fewer moving parts and require less frequent maintenance. They don't need oil changes, spark plug replacements, or timing belt adjustments, reducing ongoing maintenance expenses. This combination of lower fuel costs and reduced maintenance requirements makes electric vehicles a cost-effective choice for environmentally conscious drivers." – Mario, Richmond

Spot on answer! The energy efficiency of EVs, as well as their low maintenance needs, make these vehicles remarkably safe and dependable. Like Mario, many of our other readers mentioned the environmental benefits of EVs:

"A benefit of driving an electric car is zero tailpipe emissions." - Sue, Bremen

"Electric vehicles are better for the environment by having a lesser carbon footprint." – Todd, Winamac

"Lower carbon footprint." - Charlie, Bainbridge

This is also a great observation—No power source is completely benign environmentally. While the mining and production of the battery components causes emissions, EVs may have an edge when considering lifetime emissions of EVs versus conventional gas powered cars. As renewable energy generation becomes more popular, the electricity that fuels EVs is also becoming cleaner. This reduction in emissions improves the air quality of your community and supports renewable resource integration.

The popularity of electric vehicles steadily rises as consumers learn about the numerous benefits that they provide as compared to gas powered cars. While EVs may not be for everyone, their use is expected to grow in the coming decade. As a member of a public power utility, EVs also benefit your entire community as their fuel supply comes from your local utility. The energy purchased to charge an electric vehicle helps to support infrastructure upgrades, hometown jobs, and steady electric rates that are provided by public power utilities. Next time you're in the market for a new vehicle, consider going electric!

REACH Alert Reminder

coatesville officials understand the importance of accurate and timely communication regarding events affecting the community. Consequently, the town of Coatesville has initiated a notification service in collaboration with REACH Alert, an organization that specializes in mass communication. This notification system allows important information to be shared with the community in a matter of seconds through phone

and email alerts, keeping everyone up to date on local occurrences, including waterline breaks, boil water advisories, road closures or delays due to construction or accidents, hazmat situations, AMBER alerts, Silver alerts, police actions, and civic events.

To register with REACH Alert, go to <u>www.reachalert.com</u> and click on My Account. Then select Create Account and follow the prompts given by the website. Be sure to type "Coatesville" when asked for the network name.

If you do not have access to a computer or if you experience any difficulty registering, please contact the Town Office at (765) 386-7205.
